SAFETY SUMMARY

Please read these instructions carefully before using your LP 1000. Failure to comply with them could result in fire, electrical shock, personal injury or damage to equipment.

These graphics are used throughout this manual to draw your attention to important information about the projectors.

NOTE: *Additional useful details or tips.*

CAUTION: *Steps to take to avoid damage to your equipment.*

WARNING: *Steps to take to avoid personal injury.*

These graphics are used on the projector's labels.

Attention - Refer to this User's Guide for important safety information.

CAUTION: Hot Surfaces - Avoid touching hot surfaces. Do not touch until the projector has cooled.

Do Not Look Into The Lens!

Be extremely careful not to look into the projection lens when the projector is turned on. The bright light may harm your eyes. Be especially careful to keep children from looking into the lens.

Power Source

Use only a three-wire grounding type power source. The power source should not exceed 270 Volts RMS between the supply conductors or between either conductor and earth ground.

Power Cord

Use only the power cord that was shipped with the projector. Although other power cords might be similar in appearance, they have not been safety-tested with the projector. Do not use a power cord if it has become damaged or frayed. Contact your In Focus dealer or call In Focus if you need to replace your power cord.

Grounding

The projector is grounded through the grounding conductor on the power cord. To avoid electric shock, plug the power cord into a properly wired receptacle. Do not defeat the purpose of the grounding-type plug.

Lamp

To avoid overheating and unacceptable image quality, replace the projection lamp with a lamp of the specified type. Refer to page 45 for lamp specifications and to page 37 for instructions on replacing the lamp.

Lamp Compartment

To avoid burns, do not open the lamp module door until the projector is turned off and the lamp has cooled for at least 30 minutes. Follow the instructions in this manual for lamp replacement carefully.

Hot Surfaces

Allow the projector to cool at least 30 minutes before replacing a lamp. When you open the lamp housing, be very careful not to touch the hot surfaces inside.

Ventilation and Overheating

Openings in the projector case provide ventilation to protect it from overheating. Keep loose papers and other objects well away from the grills. Do not place the projector on top of or close to a computer or other heat-producing equipment.

Liquid Spills

Do not set drinks on top of the projector. Spilled liquids can flow inside and cause damage.

Do Not Disassemble

All service must be performed by an authorized In Focus service center. The only user-serviceable parts in the projector are the projection lamp, which you can replace by opening the lamp cover on the side of the projector (see page 37) and the fan intake filter (see page 35). Do not open any other part of the projector. If your projector needs repair, call In Focus Technical Support as described on page 4. Before you call Technical Support, you may want to refer to “Troubleshooting” starting on page 40 to see if you can resolve the problem yourself.

NOTE: If you open the projector case, you will void the warranty.

INTRODUCTION

The In Focus LP 1000 is an XGA multimedia projector designed for fixed installations. It allows 3 computer and 2 video inputs, along with RS-232 control.

Image Resolution

The LP 1000 can display VGA, SVGA, XGA, and SXGA images. The native resolution of the 1000's projected image is XGA 1024x768. Screen resolutions between 1024x768 and 1280x1024 are compressed to 1024x768. The 1000 cannot compress screen resolutions above 1280x1024. If your computer's screen resolution is higher than 1280x1024, reset it to a lower resolution before you connect the projector.

Compatibility

The projector is compatible with a wide variety of computers and video devices, including:

- IBM-compatible computers, including laptops, up to 1280x1024 resolution at 75 Hz.
- Apple Macintosh and PowerBook computers up to 1280x1024 resolution.
- Selected workstations (contact your In Focus dealer for details). (The BNC connections for workstations are listed on page 55.)
- Most standard VCRs, camcorders, DVD and laser disc players.

Unpacking the Projector

The projector comes with the items shown in Figure 1. Check to make sure all are included. Contact your In Focus dealer immediately if anything is missing.

If you are experienced in setting up presentation systems, use the *LP 1000 Quick Start* card that was included in the shipping box. For complete details on connecting and operating the projector, refer to this User's Guide. User's Guides are also available for download from our website at www.infocus.com.

NOTE: The 1000 automatically expands 640x480 and 800x600 images to fill the screen. You can display these images at their original resolutions by turning off the Auto Resize feature. See "Auto Resize" on page 31 for more information.

NOTE: The LP 1000 is compatible with many third-party controllers and amplifiers, including AMX, Crestron, and Extron. Call In Focus Customer Service for details.

FIGURE 3

Front view of LP 1000

Usage Guidelines

- Do not look directly into the projection lens when the projector is turned on. The bright light may harm your eyes.
- Do not block the grills on the projector. Do not place the projector on cloth table coverings, as they may get sucked up to the vents. Restricting the air flow can cause the projector to overheat and turn off.
- Handle the projector as you would any product with glass components. Be especially careful not to drop it.
- Avoid leaving the projector in direct sunlight or extreme cold for extended periods of time. If this happens, allow it to reach room temperature before use.
- This projector is not intended for use in mainframe computer rooms as defined in the Standard for the Protection of Electronic Computer / Data Processing Equipment, ANSI / NFPA 75.
- Transport the projector in a vendor-approved hard or soft case. Part numbers for these cases are listed on page 47. Call your In Focus dealer to order.

If You Need Assistance

The first place to look for help is in this manual. Be sure to check the guidelines in “Troubleshooting” on page 40.

If this manual doesn’t answer your question, call your In Focus dealer. You can also call In Focus Customer Service directly at **1-800-799-9911**. Customer Service is free between 5 a.m. and 5 p.m. PST, Monday through Friday. Service is available in North America after hours and on weekends for a fee at **1-888-592-6800**. In Europe, call In Focus in The Netherlands at **(31) 35-6474010**. In Singapore, call **(65) 332-0659**.

Or, send us an e-mail at techsupport@infocus.com

Our World Wide Web address is <http://www.infocus.com>.

Warranty

This product is backed by a limited two year warranty. The details of the warranty are printed at the back of this manual. A longer term warranty can be purchased from your In Focus dealer. Refer to page 48 for the part number.

SETTING UP THE PROJECTOR

- 1 Place the projector on a flat surface.
- The projector must be within 7.5 feet (2.3 m) of your power source.

If you are installing the projector on the ceiling, refer to the *LP 1000 Series Ceiling Mount Installation Guide* that comes with the Ceiling Mount Kit for more information. To turn the image upside down, see “Ceiling” on page 34. The Ceiling Mount Kit is sold separately; see page 48.
- 2 Position the projector the desired distance from the screen.
- The distance from the lens of the projector to the screen and the zoom lens setting determine the size of the projected image. Table 1 shows example projected image sizes and minimum and maximum distances to the screen.

The formulas for distance to the screen are:

Max distance (ft) = diagonal image size (ft) ÷ .541

Min distance (ft) = diagonal image size (ft) ÷ .716

Table 1:
Diagonal Image Size and Width at Maximum and Minimum Distance to Screen-Zoom Lens

Diagonal Image Size (inches)	Image Width (inches)	Distance to screen	
		Maximum distance (feet)	Minimum Distance (feet)
300	240	46.3	35.0
240	192	37	28.0
180	144	27.8	21
144	115	22.2	16.8
120	96	18.5	14
96	77	14.8	11.2
72	58	11.1	8.4
60	48	9.3	7
48	38	7.4	5.6

NOTE: An optional extension cable, sold separately, lets you increase the distance between the projector and your computer to 70 feet (21 m). See “Optional Accessories” on page 47.

NOTE: For a similar table for the optional long throw and short throw lenses, see page 54 of the Appendix.

FIGURE 4

Projected image size for 10' diagonal image size

The LP 1000 is equipped with a lens shift feature that allows you to adjust the projection height (move the image along the wall) without moving the projector, while still maintaining a perfectly square image. Turn the lens shift knob on top of the projector to make this adjustment (see Figure 3 on page 3).

The bottom of the image can move from half way below the projector's lens (Figure 5) to 25% above the lens (Figure 6).

Example: With a 10' image, at the lowest projection angle, the bottom of the image is 5' below the projector's lens; at the highest projection angle, the bottom of the image is 2.5' above the lens.

NOTE: The lens shift is not adjustable on the optional short throw lens. It is fixed at zero degrees.

FIGURE 5

Lowest image projection angle

FIGURE 6

Highest image projection angle

Once you know the diagonal image size, you can figure out the width and height using these formulas:

$$\text{width (inches)} = \text{diagonal (inches)} \times 0.8$$

$$\text{height (inches)} = \text{width (inches)} \times 0.75$$

The following tables give the lens shift values for desktop and ceiling-mounted setups for various image sizes. The lower lens shift position represents the highest the projector can be above the bottom of the screen; the upper lens shift position represents the lowest the projector can be below the bottom of the screen.

Table 2:
Lens Shift Positions for Desktop Setup

Diagonal Image Size (inches)	Distance from lens center to lower edge of screen (H)	
	Lower lens shift position (inches)	Upper lens shift position (inches)
300	-89.7	46.6
240	-71.7	37.2
180	-53.8	27.9
144	-43.0	22.3
120	-35.9	18.6
96	-28.7	14.9
72	-21.5	11.2
60	-17.9	9.3
48	-14.3	7.4

When the projector is ceiling mounted, use the upper edge of the screen as the base line.

Table 3:
Lens Shift Positions for Ceiling-Mounted Setup

Diagonal Image Size (inches)	Distance from lens center to upper edge of screen (H)	
	Lower lens shift position (inches)	Upper lens shift position (inches)
300	89.7	-46.6
240	71.7	-37.2
180	53.8	-27.9
144	43.0	-22.3
120	35.9	-18.6
96	28.7	-14.9
72	21.5	-11.2
60	17.9	-9.3
48	14.3	-7.4

FIGURE 7

Lens shift with ceiling-mounted projector

Now you're ready to connect your equipment.

Steps for connecting the different types of equipment are given on the pages listed below.

Equipment you want to connect	Page
IBM-compatible computer with CableWizard Lite	page 11
Macintosh computer with CableWizard Lite	page 12
Computer with VESA cable	page 13
Computer with BNC cables	page 13
Video player	page 14
External speaker	page 15
Remote cable	page 16
RS-232 cable	page 16

FIGURE 8

Connector panel

NOTE: For the connection pin assignments, see page 55.

The LP 1000 has the following audio / video inputs:

Source	Video	Audio
Computer 1	3 Single-ended analog RGB + 2 H&V sync (5 BNCs)	Left and right line-level (2 RCAs)*
Computer 2	VESA Single-ended analog RGB (HD-15)*	Left and right line-level (2 RCAs)*
Computer 3	CableWizard2 Analog RGB*	
Video 1	S-video Y/C (4-pin circular) OR Base-band composite video (BNC)	Left and right line-level (2 RCAs)*
Video 2	Base-band composite video (RCA)* OR Base-band composite video (BNC)	Left and right line-level (2 RCAs)*

*indicates cable included with projector

Connecting an IBM-Compatible Computer Using the CableWizard Lite Cable

The CableWizard Lite cable provides a computer connection. If you want audio, mouse control, or monitor loop-through, purchase the optional CableWizard. See “Optional Accessories” on page 47.

This input is designated Computer 3.

- 1 Plug the  end of the CableWizard Lite computer cable into the video connector on your computer.
- 2 Plug the  end of the CableWizard Lite computer cable into the Computer 3 (Comp 3) connector on the projector.

NOTE: Many laptop computers do not automatically turn on their external video port when a secondary display device such as a projector is connected. Refer to your computer manual for the command that activates the external video port. Activation commands for some laptop computers are listed in the Appendix of this manual on page 49.

FIGURE 9

Connecting the CableWizard Lite computer cable to an IBM-compatible computer

Connecting a Macintosh Computer Using the CableWizard Lite Cable

The CableWizard Lite cable provides a computer connection. If you want audio, mouse control, or monitor loop-through, purchase the optional CableWizard. See “Optional Accessories” on page 47.

This input is designated Computer 3.

- 1 Plug the  end of the CableWizard Lite computer cable into the In Focus Macintosh adaptor (sold separately).
- 2 Plug the CableWizard Lite / Mac adaptor into the video connector on your computer (or the Apple video-out cable or monitor adaptor, if needed).
- 3 Plug the  end of the CableWizard Lite computer cable into the Computer 3 (Comp 3) connector on the projector.
- 4 If you want the projector display to be the same as the PowerBook's screen display, turn on video mirroring (called SimulScan in newer PowerBooks). See “Using Video Mirroring with a PowerBook Computer” on page 53 for additional information.

 **NOTE:** Some PowerBooks require the Apple-supplied video-out cable or monitor adapter for external video. Connect it between the PowerBook and the CableWizard Lite computer cable/Mac adaptor as shown in Figure 10.

FIGURE 10

Connecting the CableWizard Lite computer cable to a Macintosh

Connecting a Computer Using a VESA cable

The supplied VESA cable connects to the High Density 15-pin connector (HD 15) on the projector. This input is designated Computer 2.

- 1 Plug one end of the VESA cable into the video connector on your computer. Plug the other end into the HD 15 connector on the projector.
- 2 If you want audio with your presentation, plug the supplied audio cable into the audio connector on your computer. Plug the other end into the  connectors on the projector above the HD 15 connector.

FIGURE 11

Connecting the VESA computer cable to a computer

Connecting a Computer using BNC cables

This input is designated Computer 1.

Connect the BNC cables to the appropriate connectors on the projector (Figure 8 on page 10) and on your computer. See “Connection Pin Assignments” on page 55 for more information.

Connecting a Video Player

- 1 If your video player uses a round, one-prong composite video connector, you'll need only the A/V cable that shipped with the projector. (Refer to Figure 14 on page 16 to see the connector types.)
 - If your video player uses a round, four-prong S-video connector, you'll need an S-video cable in addition to the A/V cable. If your video player uses a BNC connector, you'll need a BNC cable in addition to the A/V cable. The cables are sold separately. (See "Optional Accessories" on page 47.)
- 2 Plug the A/V cable's yellow connector into the "video-out" port on your video player. This port may be labeled "To Monitor."
- If you're using an S-video cable, connect it to the "s-video out" connector on the video player. If you're using a BNC cable, connect it to the BNC connector on the video player (Figure 12).
- 3 Plug the other yellow connector into the composite connector on the back of the projector (labeled  under Video 2).
- If you're using S-video or BNC, plug the other end of the cable into the "S-VID" or "BNC" connector on the projector (Figure 12).

FIGURE 12

Connecting the projector to a video player using an S-video cable and the audio connectors on the standard A/V cable

4 Plug the A / V cable's white connector into the left "audio out" port on your video player. Plug the cable's red connector into the right "audio out" port on the video player.

- If you're using an S-video or BNC cable, the yellow connectors on the A / V cable remain unused (Figure 12).

5 Plug the A / V cable's other white and red connectors to the left and right "audio in" ports on the projector directly above your video connection.

The projector is compatible with the these major broadcast video standards: NTSC, NTSC 4.43, PAL, PAL-M, PAL-N and SECAM. It automatically adjusts to optimize its performance for the incoming video. The input signals for SECAM, PAL-M, and PAL-N video cannot be automatically detected, therefore they must be chosen manually; see "Video Standard" on page 33.

Connecting an External Speaker

To connect one or two external speakers, plug the speaker cable into the  (audio out) connectors on the projector. The external speaker's volume is controlled by the projector; see "Volume" on page 25.

FIGURE 13

Connecting external speakers

CAUTION: Your video player may also have a "Video Out" port for a coaxial cable connection. *DO NOT* use this to connect to the projector.

NOTE: For more information on using the remote, see page 21.

Connecting the Remote Control Cable

If the projector cannot receive the remote's signal, as may be the case if you're using rear projection, connect the remote directly to the projector with the remote cable.

- 1 Plug the remote cable into the  connector on the projector.
- 2 Plug the other end into the connector on the remote.

FIGURE 14

Connecting the remote control cable

Connecting a Computer with an RS-232 Cable

You can control the projector from an LCD control panel by connecting an RS-232 cable to the projector (see Figure 8 on page 10). See "RS232 Terminal Specifications" on page 57 for details.

NOTE: Always use the power cord that shipped with the projector.

Powering up the Projector and Adjusting the Image

- 1 Remove the lens cap.
- 2 Plug the power cord into the side of the projector, then plug it into your electrical outlet. A surge-protected power strip is recommended if power surges are common in your area.
- 3 Turn on the projector by pressing the power button on the remote or keypad.
 - The In Focus startup screen displays.

4 If you connected a video player, turn it on.

- The image is displayed. If another source is active, press the **video 1** or **video 2** button on the remote to display the image from your video player, or press the Source button on the keypad to cycle through the sources. (You can select a default source to determine which source the projector examines first during power-up for active video; see “Default Source” on page 34.)
- Use the **volume** buttons to adjust the volume.
- If you don’t want to hear the sound from your video player, press the **mute** button.

5 If you connected any external speakers, turn them on.

6 Turn on your computer.

- The image is displayed. If another source is active, press the **computer 1, 2, or 3** button on the remote to display the image from your computer, or press the Source button on the keypad to cycle through the sources.
- You can make adjustments to the image from the projector’s on-screen menus. To open the menus, press the **menu** button on the keypad or remote. Then select the Display menu or the Image menu. For more information about the menus, see page 25.
- If you don’t want to hear the sound from your computer, press the **mute** button.

Turning Off the Projector

To turn the projector off, press the power button on the remote or keypad. The lamp stays on for 15 seconds, then turns off. The fan continues to run until the projector has cooled.

If you press power again within 15 seconds, the projector returns to normal operation immediately.

NOTE: With some computers, the order in which you power up the equipment is very important. Most computers should be turned on last, after all other peripherals have been turned on. Refer to your computer’s documentation to determine the correct order.

CAUTION: When you disconnect the projector after you have switched it off, always remove the power cord from the electrical outlet first, then remove it from the projector.

USING THE PROJECTOR

This section describes how to use and make adjustments to the projector. It also provides a reference to the remote and keypad buttons and the options available from the on-screen menus.

Basic Image Adjustment

- 1** Make sure you have powered up your equipment in the right order (page 16).
- 2** If the image doesn't display completely, adjust the height and tilt of the projector (page 20), zoom the image (page 20), or center the image by adjusting its horizontal or vertical position (page 32).
- 3** If the image is out of focus, rotate the lens to focus it (page 20).
- 4** If the image appears to shimmer or if it has blurry vertical bars after you have adjusted the focus, turn Auto Image (page 31) off and then back on to reset the automatic sync and tracking. If that doesn't clear up the image, adjust the sync (page 32) and / or the tracking (page 32) manually.
- 5** If the colors don't look right, adjust the brightness, contrast, and tint (page 27), and color and color temperature (page 28).

NOTE: In Focus has created a software program called In Focus Presents that automatically optimizes your computer's display when used with any In Focus projector. This free program is included with every projector and available for download from our website at www.infocus.com.

Adjusting the Projector

To focus the image, rotate the focus ring (Figure 15) until the image is clear. To zoom the image, rotate the zoom ring. This adjusts the image size without affecting focus.

FIGURE 15

Focus ring and zoom ring

The projector is equipped with a projection angle lens shift knob that provides 18 degrees of adjustment from horizontal. This allows you to adjust the projection height without moving the projector (see page 6 for lens shift values). It also has a height-adjustment foot and a leveling knob (Figure 17).

To adjust the height of the projector, lift the projector and move the foot to the desired position. Rotate the leveling knob, if necessary, to adjust the angle of the projected image.

FIGURE 16

Adjusting the foot

FIGURE 17

Leveling knob

Using the Remote Control

Point the remote control at the projection screen or at the projector. The range for optimum operation is about 30 feet. If you point the remote at the projection screen, the distance to the screen and back to the projector must be less than or equal to 30 feet. For best results, point the remote directly at the projector.

If you have purchased the optional CableWizard and are creating presentations in Microsoft® PowerPoint®, you can use the remote's mouse buttons to navigate through your presentation while in Slide Show mode. To configure PowerPoint for this, choose Options from the Tools menu, click the View Tab, deselect the "Popup Menu on Right Mouse Click" option in the Slide Show section, then click OK. Then, when you're in PowerPoint's Slide Show mode, a left click advances to the next slide and a right click returns to the previous slide (other PowerPoint modes are not affected).

NOTE: If you can't aim the remote control at the projector so that its signal is received — for example, when using rear projection or in a large auditorium— connect it directly to the projector with the optional remote control cable.

NOTE: If you want mouse control of the Computer 3 input, purchase the optional CableWizard. If you want mouse control of the Computer 1 or 2 inputs, purchase an optional remote and receiver. See "Optional Accessories" on page 48.

Using the Remote and Keypad Buttons

This section provides an alphabetical reference to the remote and keypad buttons.

FIGURE 18

Remote control

FIGURE 19

Keypad

Computer 1, 2 and 3

When you have more than one source (computer or video) connected to the projector, select between them by pressing the button for the source you want.

Press **computer 1, 2, or 3** to display your computer image or Lite-Show Pro presentation.

Freeze

The **freeze** button halts, or “freezes” the projected image. Use this button to freeze a frame of video (the video continues to run but the projected image is frozen). You can also freeze an image from a computer source on the screen, allowing you to perform other operations on the computer without the audience seeing them. Press **freeze** again when you want the image to return to normal.

Help ?

This displays the help screen.

Light

Press **light** to illuminate the buttons on the remote control. The light goes off automatically 10 seconds after you press any button.

Menu

Press **menu** to open the on-screen menus. Press **menu** again to close the menus. When you close the menus, the projector saves any changes you made. For more information about the on-screen menus, see page 25.

Mute

Pressing the **mute** button silences the internal speakers. It also silences any external speakers that are connected.

To return the volume to its previous setting, press **mute** again or press either **volume** button.

.....
NOTE: It takes a few seconds for the projector to recognize a new source. After the first time, the source is recognized immediately.

Scribble

The **scribble** button activates on-screen annotation.

- 1 Press the **scribble** button. The cursor changes to a pencil.
- 2 Press the right disk mouse button (Figure 20 on page 25) to display the color selector. Use the disk mouse to position the cursor on the desired color, then press the left mouse button. Press the right button again to close the color selector.
- 3 Use the disk mouse to move the pencil to where you want to start the annotation.
- 4 Press the left mouse button. The cursor changes to an upright pencil.
- 5 Use the disk mouse to draw your annotation. Press the left mouse button to complete the annotation.
- 6 To exit Scribble, press the **scribble** button. The annotation is automatically deleted (it cannot be saved).

Power

The Power button turns the projector on and off, and functions the same on the keypad and remote. When you press power while the projector is on, the lamp stays on for 15 seconds before shutting off. If you press power again within 15 seconds, the projector returns to normal operation immediately. If you don't press power again, the lamp turns off after 15 seconds. The fan continues to run until the projector has cooled (approximately 30 seconds).

Video 1 and 2

When you have more than one source (computer or video) connected to the projector, select between them by pressing the button for the source you want.

Press **video 1** or **2** to display the image from your video player.

Volume

- To increase the volume, press 
- To decrease the volume, press 

Volume adjustments are saved for each source you have connected (including external speakers).

Using the On-Screen Menus

The projector has four on-screen menus that allow you to make image adjustments and change a variety of settings. Most of these adjustments aren't available directly from the keypad or remote.

To open the on-screen menus, press the **menu** button on the keypad or remote. This changes the volume, source, and mute buttons on the keypad to menu navigation buttons (and illuminates the keypad green). Press the corresponding buttons to move the cursor up, down, left, or right. To select a menu, use these buttons to move the cursor to the tab for the menu you want, then click either mouse button. To change a menu setting, move the cursor to the setting you want to change using the navigation buttons, then use one of the two mouse buttons to make changes. Press **menu** again when you want to close the menus. All changes are saved when you close the menus.

To select a menu using the remote, use the disk mouse to move the cursor to the tab for the menu you want, then click either mouse button.

FIGURE 20

Disk mouse and mouse buttons on remote

NOTE: Some options in the menus are only available when certain equipment is connected. For example, the Fade setting in the Audio menu is only active if external speakers are connected.

The status bar at the top of the menu display indicates the source that is currently active (Computer 1, 2, or 3 or Video 1 or 2) and any peripherals that are connected.

The status bar also contains a lamp hour counter that starts at zero hours and counts each hour the lamp is in use (it does not continue counting while in standby mode). Change the bulb when the brightness is no longer acceptable. See “Replacing the Projection Lamp” on page 37.

FIGURE 21

On-screen menu status bar

Display Menu Functions

FIGURE 22

Display menu

Brightness

Adjusting the brightness changes the intensity of the image.

- Press the left mouse button to darken the image; press the right mouse button to lighten the image.

Contrast

The contrast controls the degree of difference between the lightest and darkest parts of the picture. Adjusting the contrast changes the amount of black and white in the image.

- Press the left mouse button to decrease the contrast; press the right mouse button to increase the contrast, making the blacks appear blacker and the whites appear whiter.

Tint

The **Tint** setting adjusts the amount of green in the projected image.

- Press the left mouse button to decrease the amount of green in the image; press the right mouse button to increase the amount of green in the image.

NOTE: Image settings are saved separately for each input source, allowing you to optimize the image for each source. For example, changing the brightness on Computer 1 does not affect Computer 2. Therefore, when switching between sources, the image may look different, depending on the adjustments you have made.

NOTE: If you want to display a blank screen while you're presenting, simply select an inactive source with the remote or keypad.

Color Temperature

The **Color Temperature** setting adjusts the amount of red in the projected image.

- Press the left mouse button to decrease the amount of red in the image; press the right mouse button to increase the amount of red in the image.

Blank Screen

Blank Screen determines what color is displayed when there is no active source.

- Click the “Black” button to change the option to display a blank blue screen; click the “Blue” button to display a blank black screen.

Color

The **Color** setting adjusts a video image from black and white to fully saturated color. It does not affect computer images.

- Press the left mouse button to decrease the amount of color in the image; press the right mouse button to increase the amount of color in the image.

Optimized for Brightness/Optimized for Color

This setting toggles between Optimized for Brightness and Optimized for Color. When Optimized for Color is selected, colors are optimized, sacrificing some brightness (lumens). When Optimized for Brightness is selected, brightness is optimized.

Reset All

Click either mouse button to reset all the options (except Language, Rear Projection, Ceiling, and Video Standard) in all the menus to their original settings. This also returns Freeze and Mute to their default (off) settings.

Menu Position

This lets you move the menu to various locations on the screen, allowing you to view different parts of the image while making adjustments. The default position is the center of the screen. Click Menu Position to move the menu to the upper-left corner; click it again to move it to upper-right, then lower right, then lower left, then center again.

Audio Menu Functions

FIGURE 23

Audio menu

Volume

- Press the left mouse button to decrease the volume; press the right mouse button to increase the volume.

Volume adjustments you make are saved for each source (including external speakers).

Balance

The **Balance** setting controls the balance between the left and right speakers. The **Balance** setting applies to all sources you have connected.

- Press the left mouse button to increase the amount of sound coming from the left speaker; press the right mouse button to increase the amount of sound coming from the right speaker.

NOTE: Changing the volume from the menu is the same as changing it using the keypad or remote.

NOTE: The **Treble** and **Bass** settings apply only to the projector's internal speakers. External speakers typically have their own tone controls.

Fade

The **Fade** setting controls the balance between the internal and external speakers. The setting appears gray and won't highlight if external speakers aren't connected.

- Press the left mouse button to increase the amount of sound coming from the internal speaker; press the right mouse button to increase the amount of sound coming from the external speakers.

Treble

The **Treble** setting controls the higher frequencies of your audio source.

- Press the left mouse button to decrease the treble; press the right mouse button to increase the treble.

Bass

The **Bass** setting controls the lower frequencies of your audio source.

- Press the left mouse button to decrease the bass; press the right mouse button to increase the bass.

Image Menu Functions

FIGURE 24

Image menu

Auto Image

When **Auto Image** is on, the projector automatically adjusts tracking, signal synchronization and vertical and horizontal position for most computers. If you want to adjust these features manually, you must turn off **Auto Image** first by clicking it.

Auto Resize

Auto Resize automatically resizes the image by scaling it up or down.

When **Auto Resize** is on, the projector makes the best fit of the image to the screen. If you turn **Auto Resize** off (by clicking it), the image may be either cropped or too small for the screen.

NOTE: Some screen savers interfere with the operation of Auto Image. If you're experiencing problems, try turning your screen saver off, then turning Auto Image off and back on.

NOTE: The **Manual Sync**,
Manual Tracking, **Horiz.**
Position and **Vert. Position**
buttons are available only for
computer sources. The projector
sets these options automatically
for a video source.

Manual Sync

The projector adjusts signal synchronization automatically for most computers. But if the projected computer image looks fuzzy or streaked, try turning **Auto Image** off then back on again. If the image still looks bad, try adjusting the signal synchronization manually as described below.

- 1 Click the **Auto Image** button to turn Auto Image off.
- 2 Press the left or right mouse buttons repeatedly until the image is sharp and free of streaks.

Manual Tracking

The tracking function adjusts the projector to match the video signal from your computer. The projector usually adjusts the tracking automatically when you connect your computer. However, if the display shows evenly spaced, fuzzy, vertical lines or if the projected image is too wide or too narrow for the screen, try turning **Auto Image** off then back on again. If the image is still bad, try adjusting the tracking manually as described below.

- 1 Click the **Auto Image** button to turn Auto Image off.
- 2 Press the left or right mouse buttons repeatedly until the fuzzy vertical bars are gone.

Horiz. Position

Follow these steps to manually adjust the horizontal position.

- 1 Click the **Auto Image** button to turn Auto Image off.
- 2 Press the left mouse button to move the image right; press the right mouse button to move the image left.

Positioning adjustments are saved when you power off the projector.

Vert. Position

Follow these steps to manually adjust the vertical position.

- 1 Click the **Auto Image** button to turn Auto Image off.
- 2 Press the left mouse button to move the image down; press the right mouse button to move the image up.

Positioning adjustments are saved when you power off the projector.

Controls Menu Functions

FIGURE 25

Controls menu

Video Standard

When **Auto** is on, the projector attempts to pick the video standard (NTSC, NTSC 4.43, PAL, PAL-M, PAL-N or SECAM) automatically based on the input signal it receives. (The video standard options may vary depending on your region of the world.) The input signals for SECAM, PAL-M, and PAL-N video cannot be automatically detected, therefore they must be chosen manually. If the projector is unable to detect the standard, the colors might not look right or the image might appear “torn.” If this happens, manually select a video standard by clicking the button and cycling through the standards.

Standby Time

This option lets you select how long the lamp stays on and the blank screen is displayed when you enter standby mode before the projector turns off. Select among 1, 5, 10, and 15 minutes by clicking the button and cycling through the options.

NOTE: If you already know the video standard used in your geographical area, it's often best to manually select it.

NOTE: Standby Time is applicable only when using RS-232 control or a remote that has a standby button.

NOTE: To order the LP 1000 Series Ceiling Mount, refer to “Optional Accessories” on page 47.

Language

You can display the on-screen menus in English, French, German, and Spanish. The default is English.

- Click the button for the language you want. The menus redraw immediately.

Ceiling

- Click either mouse button to turn the image upside down for ceiling-mounted projection.

Rear Projection

When you select **Rear Projection**, the projector reverses the image so you can project from behind a translucent screen.

Default Source

Default Source toggles between all five sources. This determines which source the projector checks first during power-up for active video. Click the button to toggle between the options.

Auto Source Select

This setting toggles between On and Off. When this feature is Off, the projector defaults to the source selected in Default Source. To display another source, you must manually select one by pressing the **computer** or **video** buttons on the remote or the **source** button on the keypad. When this feature is On, the projector automatically finds the active source, checking the default source first. Click the button to toggle between the options.

Display Messages

This setting toggles between On and Off. When this feature is On, status messages such as “No signal detected” and “Standby” appear in the lower-right corner of the screen. Click the button to turn this feature off and not see status messages.

Display Startup Screen

This setting toggles between On and Off. When this feature is On, the In Focus startup screen appears when the projector starts up and remains until an active source is detected. The startup screen contains information on contacting In Focus. Click the button to turn this feature off and display a plain black or blue screen instead of the startup screen.

MAINTENANCE AND TROUBLESHOOTING

This section describes how to:

- clean the lens
- clean the fan intake filter
- replace the projection lamp
- replace the batteries in the remote control
- use the Kensington lock feature
- troubleshoot the projector

Cleaning the Lens

Follow these steps to clean the projection lens:

- 1** Apply a non-abrasive camera lens cleaner to a soft, dry cloth.
 - Avoid using an excessive amount of cleaner.
 - Abrasive cleaners, solvents or other harsh chemicals might scratch the lens.
- 2** Lightly wipe the cleaning cloth over the lens.
- 3** If you don't intend to use the projector immediately, replace the lens cap.

Cleaning the Fan Intake Filter

The fan intake filter on the bottom of the projector catches dust and particles in the air. If the filter becomes clogged, the projector does not cool properly and may malfunction. To prevent this, clean the filter after every 100 hours of use.

- 1** Turn off the power and unplug the power cord.
- 2** Remove the filter door.
 - Slide the door off by the tab (Figure 26).

NOTE: If your projector is ceiling-mounted, refer to the LP 1000 Ceiling Mount Guide for instructions on removing the fan intake filter.

FIGURE 26

Removing the filter door

3 Clean the filter.

- Use a vacuum cleaner set on low power to remove the dust and dirt.

FIGURE 27

Cleaning the air filter

4 Replace the filter door.

- Slide the door in place.

Replacing the Projection Lamp

The LP 1000 is designed so you can easily change the projection lamp. The lamp hour counter on the status bar at the top of the menus (page 26) counts the number of hours the lamp has been in use. Replace the lamp when the brightness is no longer acceptable. You can order new lamp modules from your In Focus dealer. See “Accessories” on page 47 for information.

Follow these steps to replace the projection lamp:

- 1 Turn off the projector and unplug the power cord.
- 2 Wait 30 minutes to allow the projector to cool thoroughly.
- 3 Using a small, flat-blade screwdriver, remove the screw on the outside of the lamp door.
- 4 Pull the lamp door up and remove it.
- 5 Loosen the two non-removable screws on the outside of the module.

FIGURE 28

Lamp module door removed, showing 2 screws

- 6 Remove the module (Figure 29).

WARNING: To avoid burns, allow the projector to cool for at least 30 minutes before you open the lamp module door. Never extract the lamp module while the lamp is operating.

CAUTION: Never operate the projector with the lamp cover open or removed. This disrupts the air flow and causes the projector to overheat.

FIGURE 29

Removing the lamp module

WARNING: Do not drop the lamp module or touch the glass bulb! The glass may shatter and cause injury.

- 7** Align the new lamp module in the correct direction.
- 8** Gently push the module in as far as it goes.
- 9** Tighten the screws on the outside of the module.
- 10** Reposition the lamp door.
- 11** Replace the screw and tighten it.
- 12** Plug in the power cord and turn the projector back on.
- 13** To reset the lamp hour counter in the Status bar, press and hold the left mouse button, then press the menu button (while still holding down the mouse button) for 5 seconds. Verify that the counter was reset by pressing the menu button and viewing the counter (see page 26).

Replacing the Batteries in the Remote Control

The life of the batteries depends on how often and how long you use the remote. Symptoms of low battery charge include erratic responses when using the remote and a reduced range of operation.

Follow these steps to replace the batteries:

- 1 Turn the remote face down in your hand.
- 2 Slide the battery cover off the end of the remote by pressing on it with the heel of your hand.
- 3 Remove the old batteries.
- 4 Install two new AA alkaline batteries. Make sure you install each in the correct direction.
- 5 Slide the battery cover back on the remote.

Using the Kensington Lock

The projector has a Kensington Security Standard connector for use with a Kensington MicroSaver Security System (Figure 30). Refer to the information that came with the Kensington System for instructions on how to use it to secure the projector.

FIGURE 30

Installing the Kensington lock

troubleshooting help at our website
at **www.infocus.com** in the
Service section.

Troubleshooting

Solutions to Common Problems

Problem: Nothing on projection screen

- Make sure that the power cord is properly connected to a functional AC electrical outlet. Make sure that the power cord is also properly connected to the projector.
- If the projector is plugged into a power strip, make sure the power strip is turned on.
- Make sure you have removed the lens cap on the projection lens at the front of the projector.
- Make sure the projector is switched on.
- Check the projector's lamp to ensure that it is securely connected in the lamp module. See "Replacing the Projection Lamp" on page 37.
- Make sure that the cables do not have any bent pins. Check the power cord for bent pins also.

Problem: Color or text not being projected

- You might need to adjust the brightness up or down until the text is visible. Refer to "Brightness" on page 27 for more information.
- Verify that the appropriate input source is selected. See "Computer 1, 2 and 3" on page 23 or "Video 1 and 2" on page 24.

Problem: The screen resolution is not right

- Make sure the computer's graphics card is set for a resolution of no greater than 1280x1024.

Problem: Image isn't centered on the screen

- Reposition the image. Refer to "Horiz. Position" on page 32 and "Vert. Position" on page 32.
- If you're using an extension cable, make sure it's In Focus-approved.

Problem: Only the start-up screen displays

- Verify that the cables are connected correctly.
- Verify that the proper input source is connected. See “Computer 1, 2 and 3” on page 23 or “Video 1 and 2” on page 24.
- You might need to turn everything off and power up the equipment again. Make sure you power up in this order: projector, computer monitor, computer. It is especially important that you follow this sequence for Macintosh computers.
- Make sure your computer’s graphics board is installed and configured correctly.

If you’re using Windows 3.x:

- 1 In the Windows Program Manager, double-click the Windows Setup icon in the Main program group.
- 2 Verify that the Display setting is 1280x1024 or less.

If you’re using Windows 95:

- 1 Open “My Computer” icon, the Control Panel folder and then the Display icon.
- 2 Click the Settings tab.
- 3 Verify that the Desktop area is set to 1280x1024 or less.

Also check the following:

- Does your computer have a compatible graphics board? The projector isn’t CGA or EGA compatible.
- Is your computer’s graphics output port turned on? This is especially true for laptop computers. See “Portable and Laptop Activation Chart” on page 49.

Problem: Image is too wide or narrow for screen

- You might need to manually adjust the tracking to reduce or enlarge the projected image. Refer to “Manual Tracking” on page 32.

- Adjust the resolution of your monitor if it's greater than 1280x1024. Only this resolution at 75 Hz or less will display on the projector.

Problem: Image is out of focus

- Turn the projection lens to focus the image.
- Make sure the projection screen is at least 6 feet (1.8m) from the projector.
- Check the projection lens to see if it needs cleaning.

Problem: Image and menus are reversed left to right

- Rear projection mode is probably turned on. Switch back to forward projection from the Controls menu. The image should immediately return to forward projection. See “Rear Projection” on page 34.

Problem: Image and menus are upside down

- Ceiling mode is probably turned on. Turn off the mode from the Controls menu. The image should immediately return to forward projection. See “Ceiling” on page 34.

Problem: The projector displays vertical lines, “bleeding” or spots

- Adjust the brightness. See “Brightness” on page 27.
- Check the projection lens to see if it needs cleaning.

Problem: No sound

- Press the mute button.
- Adjust volume.
- Verify audio/input connections.
- Adjust audio source.

Problem: Image is “noisy” or streaked

Try these steps in this order.

- 1** Deactivate the screen saver on your computer.
- 2** Turn **Auto Image** off and then back on again. See “Auto Image” on page 31.

3 Adjust the synchronization and tracking manually to find an optimal setting. See “Manual Sync” on page 32 and “Manual Tracking” on page 32.

- If you’re using an extension cable, make sure it’s In Focus-approved.
- The problem could be with your computer’s graphics board. If possible, connect a different computer.

Problem: Projected colors don’t match the computer or video player’s colors

- Adjust the brightness, tint and / or contrast from the Display menu. Just as there are differences in the displays of different monitors, there are often differences between the computer image and the projected image. See “Brightness” on page 27, “Tint” on page 27 and “Contrast” on page 27.

Problem: Lamp seems to be getting dimmer

- The lamp begins to lose brightness when it has been in use for a long time. Replace the lamp as described in “Replacing the Projection Lamp” on page 37.

Problem: Lamp shuts off

- A minor power surge may cause the lamp to shut off. Turn the projector off, wait at least 30 seconds, then turn it back on.

Problem: Remote not operating correctly

- You might need to replace the batteries. See “Replacing the Batteries in the Remote Control” on page 39.
- Make sure you’re pointing the remote either at the top or front of the projector, or at the projection screen.
- Make sure the remote is within its operating range of 30 feet.

Problem: When in PowerPoint’s Slide Show mode, the top of the image is cut off and appears at the bottom.

- Turn **Auto Image** off to restore the image. See “Auto Image” on page 31.
- To prevent this from happening in the future, make sure the projector is displaying your presentation in PowerPoint’s Slide mode before entering Slide Show mode.

Before calling your dealer or In Focus Technical Support for assistance, please have the following information available:

- the projector's serial number (located on the bottom label)
- the computer's type and resolution

Call In Focus Technical Support at **1-800-799-9911**. Support is free between 5 a.m. and 5 p.m. PST, Monday through Friday. Support is available in North America after hours and on weekends for a fee at **1-888-592-6800**.

In Europe, call In Focus in The Netherlands at **(31) 35-6474010**. In Singapore, call **(65) 332-0659**.

Or visit our website at **www.infocus.com** and go to the Service section.

Or send us an email at **techsupport@infocus.com**.

APPENDIX

Specifications

Humidity

Operating and non-oper.	5% to 95% relative humidity, non-condensing
-------------------------	---

Dimensions

13.8 x 20 x 8 inches (35 x 50.8 x 20.3 cm)
--

Weight

24 lbs. (11.3 kg) unpacked

Optics

Focus Range-zoom lens	6 feet (1.8 m) to infinity
Long-throw lens	15 feet (4.6 m) to infinity
Short-throw lenses	3 feet to 4.9 feet (0.9-1.5 m) 4.9 feet to 8.5 feet (1.5-2.6 m) 8.2 feet to 11.8 feet (2.5-3.6 m)

Lamp

Type	350-watt metal halide
------	-----------------------

Remote Control

Battery	Two (2) AA alkaline cells
---------	---------------------------

Input Power Requirements

100/120VAC, 8.0/8.0A, 50/60 Hz 230 VAC, 5A, 50Hz
--

Audio Input

Input Impedance	8K ohm AC coupled
Maximum Input Voltage	$(L_{IN} + R_{IN})_{PEAK} < 4.5 \text{ V}$ for $THD \leq 0.3\%$ L_{IN} or $R_{IN} < 2.0 \text{ Vrms}$ for $THD \leq 0.3\%$
Sensitivity	100 mV at 1 KHz for 88 dB SPL at 1 meter
Connector Type	red and white RCA jacks

Audio Output

Frequency Response	10 Hz - 20 KHz
Output Impedance	1.0K ohm nominal
Output Voltage	2 Vrms maximum (open circuit)
Connector Type	red and white RCA jacks

Accessories

Standard Accessories (ship with the projector)	Part Number
LP 1000 Quick Start card	009-0331-xx

Portable and Laptop Activation Chart

Many laptop computers do not automatically turn on their external video port when a secondary display device such as a projector is connected. Activation commands for some laptop computers are listed in the following table. (If your computer is not listed or the given command does not work, refer to the computer's documentation for the appropriate command.) On some laptops, the activation function key is labeled with an icon, for

example  or the text CRT/LCD.

Computer	Key command to activate port	Key command to de-activate port

* These manufacturers have models that automatically send video to the external CRT port when some type of display device is attached.

** These manufacturers offer more than one key command depending on the computer model.

Using Video Mirroring with a PowerBook Computer

When you turn video mirroring (called SimulScan in newer PowerBooks—see below) on, the projector displays the same information that appears on your PowerBook's built-in screen. When video mirroring is off, the projector acts like a separate display.

To turn on video mirroring for the first time:

- 1 Open the Monitors control panel; click on Monitor 2.
- 2 Set the number of colors you want.
- 3 Open the Control Strip; click on the monitor icon.
- 4 Select "Turn Video Mirroring On."

Now you can turn video mirroring on and off from the Control Strip without having to open the Monitors control panel again.

When using video mirroring and high color graphics such as slide shows, the projected image occasionally might turn black and white. If this happens, perform the following steps:

- 1 Turn off video mirroring.
- 2 Open the Monitors control panel.
- 3 Move the white menu bar to Monitor 2 to set the projector as the primary monitor.
- 4 Restart the PowerBook.

Using SimulScan

Some newer PowerBooks display images on an external monitor or projector differently than previous ones. When using SimulScan, the projector displays the same information that appears on your PowerBook

To select SimulScan:

- 1 Open the Control Panel, then double-click Monitors and Sound.
- 2 In the Resolution list, choose the SimulScan mode, then click OK.
- 3 If this changes your display settings, a dialog box appears. Click OK to confirm the change.

Projected Image Size for Optional Lenses

There is one long throw lens and three short throw lenses available. The short throw lenses are specific for certain focus distances. HW-LENS-ST1 has a focus distance of 3 feet to 4.9 feet (0.9-1.5 m); HW-LENS-ST2 has a focus distance of 4.9 feet to 8.5 feet (1.5-2.6 m); HW-LENS-ST3 has a focus distance of 8.2 feet to 11.8 feet (2.5-3.6 m).

NOTE: The lens shift is not adjustable on the optional short throw lens. It is fixed at zero degrees.

Table 4:
**Diagonal Image Size and Width vs Distance to Screen-
Long Throw and Short Throw Lenses**

Diagonal Image Size (inches)	Image Width (inches)	Distance to screen	
		Long Throw (feet)	Short Throw (feet)
300	240	100	N/A
240	192	80	N/A
180	144	60	N/A
148	118	49	11.8
120	96	40	9.6
106	85	35	8.5
96	77	32	7.7
72	58	24	5.8
61	49	20	4.9
38	30	N/A	3.0

The formulas for distance to the screen are:
Long throw lens distance (ft) = diagonal image size (ft) ÷ .25
Short throw lens distance (ft) = diagonal image size (ft) ÷ 1.042

Connection Pin Assignments

HD 15

1. Video input (red)	9. Unused
2. Video input (green)	10. Ground
3. Video input (blue)	11. Unused
4. Unused	12. DDC data
5. Ground	13. Horizontal sync signal
6. Ground (red)	14. Vertical sync signal
7. Ground (green)	15. DDC clock
8. Ground (blue)	

5 BNC

R Video input (red)
G Video input (green)
B Video input (blue)
H Horizontal sync signal
V Vertical sync signal

RS-232

1. Not used	6. Not used
2. Receive data	7. Not used
3. Send data	8. Not used
4. Not used	9. Not used
5. Ground	

NOTE: Pin assignments are not available for the CableWizard2 connector.

NOTE: When all 5 BNCs are connected, the projector handles separate sync on H and V. When 4 BNCs are connected, the projector handles a combined sync on H. The LP 1000 does not support sync on Green when 3 BNCs are connected.

S-video

Wired remote

RS232 Terminal Specifications

Communication configuration

To control the LP 1000 from an LCD control panel, connect the RS232 cable and set your computer's serial port settings to match this communication configuration:

Setting	Value
Bits per second	19,200
Data bits	8
Parity	None
Stop bits	1
Flow control	None
Emulation	VT100

Command format

All commands consist of 3 alpha characters followed by a request, all enclosed in parentheses. The request can be a read request (indicated by a "?") or a write request (indicated by 1 to 4 ASCII digits).

A read request format: (AAA?) where

(starts the command
AAA denotes the command
? denotes the read request
) ends the command

A read command returns the range and the current setting, for example:

Function	Command	Response
Brightness	(BRT?)	(0-22, 10)
Volume	(VOL?)	(0-80, 0)
Lamp hours	(LMP?)	(0-9999, 421)

A write request example: (AAA####) where

- (starts the command
- AAA denotes the command
- #### denotes the value to be written (leading zeros not necessary)
-) ends the command

NOTE: To assure the projector can process a command, wait 3 seconds before entering the next command.

Some commands have ranges, while others are absolute. If a number greater than the maximum range is received, it is automatically set to the maximum number for that function. If a command is received that is not understood, a “?” is returned. With absolute settings, “0” is off, 1-9999 is on. The one exception is the Power command, where 0 is off and 1 is on.

Function	Command	Response
Brightness	(BRT10)	Sets the brightness to 10
Freeze	(FRZ1) or (FRZ8888)	Freezes the display
Power	(PWR0)	Turns power off
Power	(PWR1)	Turns power on
Power	(PWR9999)	?

Supported commands

Function	Command	Range
Power (Write only)	PWR	0-1
Lamp Hours (Read only)	LMP	0-9999
Standby	STB	0-1
Freeze	FRZ	0-1
Brightness	BRT	0-255
Contrast	CON	0-255 (0-127 for video)
Tint	TNT	0-255 (0-63 for video)
Saturation	CLR	0-63

Reset All	RST	0-1
Auto Source Select Control	ASC	0-1
Default Source	DSC	0-4 0 = Computer 1 1 = Computer 2 2 = Computer 3 3 = Video 1 4 = Video 2
Source	SRC	0-4 (same designations as Default Source)
Volume	VOL	0-80
Mute	MTE	0-1
Balance	BAL	0-63
Fade	FAD	0-63
Treble	TRB	0-14
Bass	BAS	0-14
Auto Image	AIM	0-1
Auto Reseize	ARZ	0-1
Manual Sync Setting	MSS	0-19
Manual Tracking Setting	MTS	0-63
Horizontal Position Setting	HPS	0-63
Vertical Position Setting	VPS	0-63
Video Standard	VSU	0-4 0 = Auto 1 = NTSC 2 = PAL 3 = SECAM 4 = NTSC4.43
Language	LAN	0-3 0 = English 1 = French 2 = German 3 = Spanish
Ceiling	CEL	0-1
Rear Project	REA	0-1

LIMITED WARRANTY

In Focus, Inc. ("In Focus") warrants that each LP 1000 ("the Product") sold hereunder will conform to and function in accordance with the written specifications of In Focus. Said limited warranty shall apply only to the first person or entity that purchases the Product for personal or business use and not for the purpose of distribution or resale. The product may contain recycled components that are in new condition. Said warranty shall continue for a period of two (2) years from the date of such purchase. The standard limited warranty excludes the lamps in projectors after 90 days and the accessories after one year. In Focus does not warrant that the Product will meet the specific requirements of the first person or entity that purchases the Product for personal or business use. In Focus' liability for the breach of the foregoing limited warranty is limited to the repair or replacement of the Product or refund of the purchase price of the Product, at In Focus' sole option. To exercise the Purchaser's rights under the foregoing warranty, the Product must be returned at the Purchaser's sole cost and expense, to In Focus or to any authorized In Focus service center provided, however, that the Product must be accompanied by a written letter explaining the problem and which includes (i) proof of date of purchase; (ii) the dealer's name; and (iii) the model and serial number of the Product. When sending your unit in for repair, please ship your unit in its original packing material or an In Focus approved ATA Shipping Case, or have a professional packaging company pack the unit. Please insure your shipment for its full value. A return authorization number, issued by the In Focus customer service department, must also be clearly displayed on the outside of the shipping carton containing the Product.

WARRANTY LIMITATION AND EXCLUSION

In Focus shall have no further obligation under the foregoing limited warranty if the Product has been damaged due to abuse, misuse, neglect, accident, unusual physical or electrical stress, unauthorized modifications, tampering, alterations, or service other than by In Focus or its authorized agents, causes other than from ordinary use or failure to properly use the Product in the application for which said Product is intended.

DISCLAIMER OF UNSTATED WARRANTIES

THE WARRANTY PRINTED ABOVE IS THE ONLY WARRANTY APPLICABLE TO THIS PURCHASE. ALL OTHER WARRANTIES, EXPRESS OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE ARE DISCLAIMED. THERE ARE NO WARRANTIES THAT EXTEND BEYOND THE FACE HEREOF AND THE FOREGOING WARRANTY SHALL NOT BE EXTENDED, ALTERED OR VARIED EXCEPT BY WRITTEN INSTRUMENT SIGNED BY IN FOCUS.

LIMITATION OF LIABILITY

IT IS UNDERSTOOD AND AGREED THAT IN FOCUS' LIABILITY WHETHER IN CONTRACT, IN TORT, UNDER ANY WARRANTY, IN NEGLIGENCE OR OTHERWISE SHALL NOT EXCEED THE RETURN OF THE AMOUNT OF THE PURCHASE PRICE PAID BY PURCHASER AND UNDER NO CIRCUMSTANCES SHALL IN FOCUS BE LIABLE FOR SPECIAL, INDIRECT OR CONSEQUENTIAL DAMAGES OR LOST PROFITS, LOST REVENUES OR LOST SAVINGS. THE PRICE STATED FOR THE PRODUCT IS A CONSIDERATION IN LIMITING IN FOCUS' LIABILITY. NO ACTION, REGARDLESS OF FORM, ARISING OUT OF THE AGREEMENT TO PURCHASE THE PRODUCT MAY BE BROUGHT BY PURCHASER MORE THAN ONE YEAR AFTER THE CAUSE OF ACTION HAS ACCRUED.
