

Operating Instructions

DLP® Based Projector **Commercial Use**

Model No. **PT-D5700U**
PT-D5700UL
PT-DW5100U
PT-DW5100UL

Read these instructions completely before operating this unit.

Dear Panasonic Customer:

This instruction booklet provides all the necessary operating information that you might require. We hope it will help you to get the most performance out of your new product, and that you will be pleased with your Panasonic DLP® based projector.

The serial number of your product may be found on its back. You should note it in the space provided below and retain this booklet in case service is required.

Model number: **PT-D5700U/PT-D5700UL/PT-DW5100U/PT-DW5100UL**

Serial number:

IMPORTANT SAFETY NOTICE

WARNING: TO REDUCE THE RISK OF FIRE OR ELECTRIC SHOCK, DO NOT EXPOSE THIS PRODUCT TO RAIN OR MOISTURE.

The lightning flash with arrowhead symbol, within an equilateral triangle, is intended to alert the user to the presence of uninsulated “dangerous voltage” within the Product’s enclosure that may be of sufficient magnitude to constitute a risk of electric shock to persons.

The exclamation point within an equilateral triangle is intended to alert the user to the presence of important operating and maintenance (servicing) instructions in the literature accompanying the product.

CAUTION: This equipment is equipped with a three-pin grounding-type power plug. Do not remove the grounding pin on the power plug. This plug will only fit a grounding-type power outlet. This is a safety feature. If you are unable to insert the plug into the outlet, contact an electrician. Do not defeat the purpose of the grounding plug.

Do not remove

WARNING: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

FCC CAUTION: To assure continued compliance, use only shielded interface cables when connecting to computer or peripheral devices. Any unauthorized changes or modifications to this equipment could void the user's authority to operate.

WARNING:

Not for use in a computer room as defined in the Standard for the Protection of Electronic Computer/Data Processing Equipment, ANSI/NFPA 75.

Declaration of Conformity

Model Number: PT-D5700U/PT-D5700UL/PT-DW5100U/PT-DW5100UL
Trade Name: Panasonic
Responsible Party: Panasonic Corporation of North America
One Panasonic Way, Secaucus, New Jersey 07094
Telephone Number: 888-411-1996
Email: projectorsupport@us.panasonic.com

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

NOTE:

This product has a High Intensity Discharge (HID) lamp that contains mercury. Dispose may be regulated in your community due to environmental considerations. For disposal or recycling information, please contact your local authorities, or the Electronic Industries Alliance: <http://www.eiae.org>

Precautions with regard to safety

WARNING

If you notice smoke, strange smells or noise coming from the projector, disconnect the power cord plug from the wall outlet.

- Do not continue to use the projector in such cases, otherwise fire or electric shocks could result.
- Check that no more smoke is coming out, and then contact an Authorized Service Center for repairs.
- Do not attempt to repair the projector yourself, as this can be dangerous.

Installation work (such as ceiling suspension) should only be carried out by a qualified technician.

- If installation is not carried out correctly, there is the danger that injury or electric shocks may occur.
- Use the dedicated ceiling mount bracket specified for the model.
- Use the provided safety wire cable and take measures to prevent the projector from falling.

Do not overload the wall outlet.

- If the power supply is overloaded (for example, by using too many adapters), overheating may occur and fire may result.

Do not look into the lens while the projector is being used.

- Strong light is emitted from the projector's lens. If you look directly into this light, it can hurt and damage your eyes.
- Be especially careful not to let young children look into the lens. In addition, turn off the power and disconnect the power cord plug when you are away from the projector.

Never attempt to modify or disassemble the projector.

- High voltages can cause fire or electric shocks.
- For any inspection, adjustment and repair work, please contact an Authorized Service Center.

Do not install this projector in a place which is not strong enough to take the full weight of the projector or on top of a surface which is unstable.

- If the projector is installed in a place which is not strong enough or on top of a surface which is sloped or unstable, it may fall down or tip over, and severe injury or damage could result.

If foreign objects or water get inside the projector, or if the projector is dropped or the cabinet is broken, disconnect the power cord plug from the wall outlet.

- Continued use of the projector in this condition may result in fire or electric shocks.
- Contact an Authorized Service Center for repairs.

Do not place liquid containers on top of the projector.

Do not place the projector into water or let it become wet.

- If water spills onto the projector or gets inside it, fire or electric shocks could result.
- If any water gets inside the projector, contact an Authorized Service Center.

Do not insert any foreign objects into the projector.

- Do not insert any metal objects or flammable objects into the projector or drop them onto the projector, as doing so can result in fire or electric shocks.

Use only the power cord supplied with the projector.

Do not use the supplied power cord with equipment other than the projector.

- Failure to observe this may result in electric shocks.

Insert the power cord plug securely into the wall outlet.

- If the plug is not inserted correctly, electric shocks or overheating could result.
- Do not use plugs which are damaged or wall outlets which are coming loose from the wall.

Do not do anything that might damage the power cord or the power cord plug.

- Do not damage the power cord, make any modifications to it, place it near any hot objects, bend it excessively, twist it, pull it, place heavy objects on top of it or wrap it into a bundle.
- If the power cord is used while damaged, electric shocks, short-circuits or fire may result.
- Ask an Authorized Service Center to carry out any repairs to the power cord that might be necessary.

Clean the power cord plug regularly to prevent it from becoming covered in dust.

- If dust builds up on the power cord plug, the resulting humidity can damage the insulation, which could result in fire. Pull the power cord plug out from the wall outlet and wipe it with a dry cloth.
- If not using the projector for an extended period of time, pull the power cord plug out from the wall outlet.

Do not handle the power cord plug with wet hands.

- Failure to observe this may result in electric shocks.

Precautions with regard to safety

Do not set up the projector in humid or dusty places or in places where the projector may come into contact with oily smoke or steam.

- Using the projector under such conditions may result in fire, electric shocks or plastic deterioration. The plastic deterioration may cause the falling down of the projector which is mounted in the ceiling.

Do not place the projector on soft materials such as carpets or sponge mats.

- Doing so may cause the projector to overheat, which can cause burns, fire or damage to the projector.

During a thunderstorm, do not touch the projector or the cable.

- Electric shocks can result.

Do not place your hands or other objects close to the air outlet port.

- Heated air comes out of the air outlet port. Do not place your hands or face, or objects which cannot withstand heat close to this port [allow at least 50 cm (19.7") of space], otherwise burns or damage could result.

Do not use or handle the batteries improperly.

- Failure to observe these precautions may cause the batteries to leak, overheat, explode or catch fire.
 - Do not disassemble the dry cell batteries.
 - Do not heat, or disassemble the batteries or place them into fire or liquids such as water.
 - Do not connect the + and - terminals with wire or other metallic objects.
 - Do not store batteries together with metallic objects such as necklaces or hairpins.
 - Make sure the polarities (+ and -) are correct when inserting the batteries.
 - Do not use a new battery together with an old battery or mix different types of batteries.
 - Do not use batteries with the outer covering peeling away or removed.
 - Do not use rechargeable batteries in place of the dry cell batteries.
 - The batteries have a protective outer covering. Do not remove this covering, as this may result in a short circuit.

If the battery fluid leaks, do not touch it with bare hands, and take the following measures if necessary.

- Battery fluid entering your eyes may result in loss of sight. In this case, do not rub your eyes. Rinse with clean water and seek medical advice immediately.
- Battery fluid on your skin or clothing may result in skin inflammation or injury. Rinse with clean water and seek medical advice immediately.

Remove empty batteries from the remote control at once.

- Do not leave empty batteries inside the equipment, as this may cause the batteries to leak, overheat or explode.

Before replacing the lamp, be sure to disconnect the power cord plug from the wall outlet.

- Electric shocks or explosions can result if this is not done.

When replacing the lamp, allow it to cool for at least one hour before handling it.

- The lamp cover gets very hot, and touching it can cause burns.

Do not disassemble the lamp unit.

- If the lamp section breaks, it may cause injury.

Caution

When disconnecting the power cord, hold the plug, not the cord.

- If the power cord itself is pulled, the cord will become damaged, and fire, short-circuits or serious electric shocks may result.

Always disconnect all cables before moving the projector.

- Moving the projector with cables still attached can damage the cables, which could cause fire or electric shocks to occur.

Do not place a projector or other heavy object on top of the unit.

Do not put your weight on this projector.

- Failure to observe this may cause the projector to become unbalanced and fall, which could result in damage or injury.
- The projector may be damaged or deformed.

Do not prevent heat loss.

- Doing so may cause the projector to overheat, which can cause fire or damage to the projector.
- Do not place the projector in narrow, badly ventilated places such as closets or bookshelves.
- Do not place the projector on cloth or papers, as these materials could be drawn into the air inlet port.

If the lamp has broken, ventilate the room immediately. Do not touch or bring your face close to the broken pieces.

- Failure to observe this may cause the user to absorb the gas which was released when the lamp broke and which contains nearly the same amount of mercury as fluorescent lamps, and the broken pieces may cause injury.
- If you believe that you have absorbed the gas or that the gas has got into your eyes or mouth, seek medical advice immediately.
- Ask your dealer about the replacement of the lamp unit and check the inside of the projector.

If not using the projector for an extended period of time, disconnect the power cord plug from the mains socket.

- If dust builds up on the power cord plug, the resulting humidity may damage the insulation, which could result in fire.

Disconnect the power cord plug from the wall outlet as a safety precaution before carrying out any cleaning.

- Electric shocks can result if this is not done.

Be careful not to catch your fingers between the lens and shroud when shifting the lens.

- Do not catch your fingers between the lens and shroud when shifting the lens as it may cause injury.

Ask an Authorized Service Center to clean inside the projector at least once a year.

- If dust is left to build up inside the projector without being cleaned out, it can result in fire or problems with operation.
- It is a good idea to clean the inside of the projector before the season for humid weather arrives. Ask your nearest Authorized Service Center to clean the projector when required. Please discuss with the Authorized Service Center regarding cleaning costs.

If not using the projector for an extended period of time, remove the batteries from the remote control.

- Failure to do so may cause the batteries to leak, overheat, catch fire or explode, possibly resulting in fire or corruption of surrounding areas.

Do not use the old lamp unit.

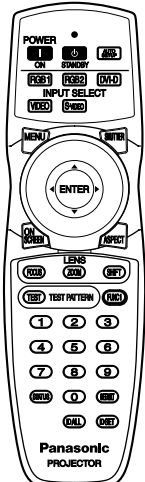

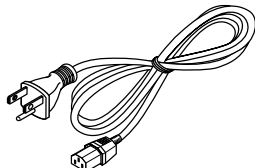

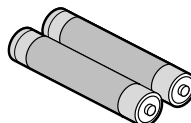

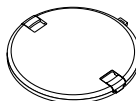

- The lamp section may break.

Do not place the projector in extremely hot locations.

- Doing so may cause the outer casing or internal components to deteriorate, or result in fire.
- Take particular care in locations exposed to direct sunlight or near stoves.

Accessories

Check that all of the accessories shown below have been included with your projector.

<p>Remote control unit [N2QAYB000164 x 1]</p> 	<p>Power cord [K2CG3FZ00008 x 1]</p> 	<p>Battery for remote control unit (AA) [R6DW/2ST]</p> 	<p>Lens cover [TKKL5244-1 x 1]</p> 	<p>Wire cable [TKLA3201 x 1]</p>  <p>Wire fastening M6 screw [XYN6+F10FJ x 1]</p>

Precautions on handling

■ Precautions on transport

Make absolutely sure that the lens cap is in place when transporting the projector or carrying it around. Both the projector and the projection lens are precision-made and, as such, are susceptible to vibration and impacts. When transporting the projector and lens or carrying them around, place them in the boxes in which they were housed at the time of purchase, and take care to keep them away from vibration and impacts.

■ Precautions on installation

Be sure to observe the following precautions when installing the product.

● Avoid installing the product in a place exposed to vibrations or impacts.

If the projector is installed in a place where vibrations are transmitted from a source of driving power and others or mounted in a car or a vessel, vibrations or impacts may be transmitted to the product to damage the internal parts, causing failure. Install the product in a place free from vibrations and impacts.

● Do not move the projector while it is operating or subject it to vibration or impact.

The service life of its internal motors may be shortened.

● Do not install the projector near high-voltage power lines or power sources.

The product may be exposed to interference if it is installed in the vicinity of high-voltage electrical power lines or power sources.

● Do not place the projector on a vinyl sheet or carpet.

If a vinyl sheet sucked up and blocks the air filter intake port, the internal temperature of the projector may increase, which triggers the protection circuit, turning off the power.

● Be sure to ask a specialized technician when installing the product to a ceiling.

If the product is to be installed hanging from the ceiling, purchase an optional hanging attachment (for high ceiling: Model No. ET-PKD56H) (for low ceiling: Model No. ET-PKD55S). Please call a specialized technician or contact an Authorized Service Center for installation.

● Install the projector so that it will be supported only by its bottom panel and by none of its other parts or surfaces.

● Do not place the projector over 2 700 m (8 858.3') above sea level. When using it over 1 400 m (4 593.2') above sea level, set the "ALTITUDE", described on page 38, to "HIGH".

Otherwise the life of the product may be shortened. When using it over 2 700 m above sea level, consult your dealer.

● Lens Focus

Do not adjust the lens focus in the initial period (within approx. 30 minutes) after switching the projector on. The high clarity projector lens is thermally affected by the light from the light source, making the focus unstable in the period just after switching on. Please allow a warm-up time of at least 30 minutes before adjusting the lens focus. Failure to do so may cause heating focus drift.

■ Disposal

To discard the product, call the dealer or a specialized dealer.

■ Precautions on use

● To view clear images:

- The audience cannot enjoy high-contrast and clear images if outside light or the illumination interferes the screen surface. Draw window curtains or blinds, turn off the lightings near the screen or take other proper measures.
- Depending on where the projector is used, there are rare occasions when hot air from the air exhaust vents or the warm air from air conditioning can cause a shimmering effect on the screen. For this reason, take care not to shield the air exhaust vents and consider the direction of the air flowing from air conditioning.

● Do not touch the surface of the projection lens with bare hand.

If fingerprints or stains are left on the projection lens surface, they are magnified and projected on the screen. Keep your hands away from the lens. Cover the lens with the supplied lens cap when the projector is not used.

● Lamp

A mercury lamp with high internal pressure is used for the light source of this product. A high-pressure mercury lamp has the following characteristics:

- It may burst with a loud sound or end its life cycle by not illuminating because of given impacts, flaws, or deterioration due to used hours.
- The life cycle of a mercury lamp varies according to the individual difference or conditions of use. In particular, turning the power on and off frequently and/or repeatedly will greatly affect the life cycle.
- In rare cases, it may burst shortly after the first lighting.
- The possibility of burst increases when the lamp is used beyond the replacement time.
- **Lamp deterioration accelerates when used continuously for 24 hours or more. Lamp deterioration due to continuous use can be reduced by using the "LAMP RELAY" function.**

Cleaning and maintenance

Be sure to remove the power cord plug from the receptacle before cleaning.

Use soft and dry cloth to clean the cabinet.

If stains are hard to remove, use a cloth dampened with a kitchen detergent solution (neutral) and squeezed to wipe the cabinet and finish with a dry cloth. If a chemical wipe is used, follow its instructions.

Do not clean the lens surface with fuzzy or dusty cloth.

If dust adheres to the lens, it will be magnified and projected on the screen.

Use a soft and clean cloth to wipe off dust.

Name and function of parts

Remote control

- ① **Remote control operation indicator lamp**
The lamp flashes when any remote control button is pressed.
- ② **POWER STANDBY (⏻) button (page 25)**
Switched the power to the “standby” mode if the MAIN POWER has been put to the “I” position.
- ③ **POWER ON (⏻) button (page 24)**
Turns on the power if the MAIN POWER has been put to the “I” position.
- ④ **Input selector (RGB1, RGB2, DVI-D, VIDEO, S-VIDEO) button**
Use to toggle through the RGB1, RGB2, DVI-D, VIDEO and S-VIDEO input ports.
- ⑤ **MENU button (page 29)**
Displays and clears the MAIN MENU. It can also return to the previous screen when the menu is displayed.
- ⑥ **Arrow ▲ ▼ ◀ ▶ buttons (page 29)**
Use these buttons to select an item on the menu screen, change setting and adjust the level. Also use them to enter the “SECURITY” password.
ENTER button (page 29)
Press this button to enter your menu selection or to run function.
- ⑦ **ON SCREEN button**
This button turns on and off the on-screen indication function.
- ⑧ **TEST PATTERN button (page 40)**
This displays the test pattern.
- ⑨ **Numeric (0 - 9) buttons (pages 15, 40)**
These buttons are used for systems where more than one projector is being used. They are used to enter ID numbers when selecting an ID, and they are also used by service personnel for entering passwords when password entry is needed.
- ⑩ **STATUS button (page 27)**
Press this button to display projector information. It can also be used to send information about the projector’s status via E-mail.
- ⑪ **AUTO SETUP button (page 27)**
Pressing this button while projecting an image automatically corrects the picture positioning on the screen. While the auto setup feature is active, a message “AUTO SETUP” appears on the screen.
- ⑫ **SHUTTER button (page 27)**
Press this button to black out the image temporarily.
- ⑬ **ASPECT button (page 31)**
Switches the image aspect ratio.

Name and function of parts

⑭ LENS (FOCUS, ZOOM, SHIFT) buttons (page 26)

These buttons are used to adjust the projection lens.

⑮ Function 1 (FUNC1) button (page 37)

This button can control the functions set in “FUNC1” of the “OPTION1” screen from the MAIN MENU.

⑯ DEFAULT button (page 29)

Press this button to restore the default factory setting.

⑰ ID SET button (page 15)

When two or more main units are used in the system, this button specifies the ID of the remote control.

⑱ ID ALL button (page 15)

When two or more main units are used in the system, this button switches to the mode to control them simultaneously with a single remote control.

⑲ Remote control transmitter window

Operate the remote control aiming at the remote control receiver window on the main unit.

⑳ Remote control wired terminal (page 15)

To use the wired output terminal, connect the remote control and the main unit with the M3 stereo mini jack cable available in the market.

Front and side of the projector

- ① **AC IN terminal (page 24)**
Connect the supplied line power cord into this receptacle.
Do not connect any other cable to this socket.
- ② **Air filter (page 55)**
- ③ **Burglar lock**
Attach a commercial burglar prevention cable (e.g., from Kensington) to this lock port. It is compatible with the Microsaver Security System from Kensington.
- ④ **Clasp for attaching anti-theft chain**
Attach a chain or other fastening device available from a hardware store through this clamp.
- ⑤ **Level-adjusting feet (page 24)**
Use these feet to adjust the tilt of the projector. (The leveling feet at the front left and right can be adjusted.)
- ⑥ **Lens release button (page 26)**
Press this to remove the projection lens.
- ⑦ **Projection lens**
Lens for projecting images on the screen.
- ⑧ **Lens left/right adjusting dial (page 27)**
Turn this clockwise to move the screen to the left; conversely, turn it counterclockwise to move it to the right.
- ⑨ **Remote control receiver window (front) (page 14)**
This window receives the signal beam emitted from the remote control.
- ⑩ **Focus ring (page 26)**
For focus adjustment.
Powered focus adjustment is also available.
- ⑪ **Temperature monitor (TEMP) (page 54)**
Lighting or blinking of this lamp indicates an abnormal condition of the internal temperature.
- ⑫ **LAMP1 monitor (page 54)**
This lamp lights up when the time to replace lamp unit 1 is reached. It also blinks if something unusual occurs in the lamp circuit.
- ⑬ **LAMP2 monitor (page 54)**
This lamp lights up when the time to replace lamp unit 2 is reached. It also blinks if something unusual occurs in the lamp circuit.
- ⑭ **Power indicator (page 24)**
The lamp lights in red when the MAIN POWER switch is turned to "I" (on). It turns to green when the POWER ON button of the remote control or the main unit is pressed.
- ⑮ **Lens cap**
Cap the lens whenever the projector is left unused.
- ⑯ **Air intake vents**

Attention • Do not remove the upper cover (white or black top panel).

Name and function of parts

Rear view of the main unit

Controls on rear panel

① Air exhaust vents

Do not place your hands or other objects close to the air outlet port.

- Heated air comes out of the air outlet port. Do not place your hands or face, or objects which cannot withstand heat close to this port [allow at least 50 cm (19.7") of space], otherwise burns or damage could result.

② Lamp unit cover

The lamp unit is housed.

③ MAIN POWER switch (page 24)

Use this switch to turn on "I" and off "O" the main power applied to the projector.

④ Remote control receiver window (rear) (page 14)

This also receives the signal beam coming from the remote control.

⑤ POWER ON (I) button (page 24)

Turns on the power.

⑥ POWER STANDBY (⏻) button (page 25)

Switches the power to the "standby" mode.

⑦ RGB1 button (page 24)

Switches to RGB1 input.

⑧ RGB2 button (page 24)

Switches to RGB2 input.

⑨ VIDEO button (page 24)

Switches to video input.

⑩ S-VIDEO button (page 24)

Switches to S-VIDEO input.

⑪ MENU button (page 29)

Displays and clears the MAIN MENU. It can also return to the previous screen when the menu is displayed.

The on-screen display (OSD) selection menu can be displayed by holding down the menu key for at least three seconds.

⑫ AUTO SETUP button (page 27)

Pressing this button while projecting an image automatically corrects the picture positioning on the screen.

⑬ DVI button (page 24)

Switches to DVI-D input.

⑭ SHUTTER button (page 27)

Press this button to black out the image temporarily.

⑮ ENTER button (page 29)

Press this button to enter your menu selection or to run function.

⑯ LENS button (page 26)

Switches to the adjustment mode for lens focus, zoom and shift (position).

⑰ Arrow (▲ ▼ ◀ ▶) buttons (page 29)

Use to select an item on the menu screen, change setting and adjust the level.

Also use them to enter the "SECURITY" password.

Side-mounted connection terminals

- ① **VIDEO IN terminal (page 23)**
An input terminal for video signals. (BNC)
- ② **S-VIDEO IN terminal (page 23)**
An input terminal for S-Video signals. (MIN4-pin DIN)
This terminal complies with S1 signals and automatically toggles between 16:9 and 4:3 according to the size of input signals.
- ③ **RGB 1 input (RGB 1 IN) terminal (page 23)**
A terminal to input RGB or YPbPr signals. (BNC)
- ④ **RGB 2 input (RGB 2 IN) terminal (page 23)**
A terminal to input RGB or YPbPr signals. (D-Sub 15-pin female)
- ⑤ **DVI-D IN terminal (page 23)**
DVI-D signals are applied to this terminal. (24-pin DVI-D connector)
- ⑥ **LAN terminal (page 41)**
This terminal is used to control the projector from the PC. (10BASE-T/100BASE-TX compliant)
- ⑦ **REMOTE1 IN/OUT terminal (page 15)**
When two or more main units are used in the system, they can be connected and controlled with M3 stereo mini jack cable available in the market.
- ⑧ **REMOTE2 IN terminal (page 53)**
The user can remotely control the main unit by using an external control circuit to this terminal. (D-Sub 9-pin female)
- ⑨ **SERIAL IN terminal (pages 23, 52)**
Use the RS-232C serial terminal as an alternative interface for controlling the projector from your PC. (D-Sub 9-pin female)
- ⑩ **SERIAL OUT terminal (pages 23, 52)**
The signal applied to the serial input terminal appears at this terminal. (D-Sub 9-pin male)

LAN terminal (10BASE-T/100BASE-TX)

Connect LAN cable.

Using the remote control unit

■ Loading dry cells

When loading batteries into the battery compartment of the remote control, make sure that their polarities are correct.

1. Open battery compartment lid.

Open the lid in the order of steps ① and ②.

2. Insert the dry cells.

Into battery compartment, with their polarities orientated as indicated (+, -) in the compartment.

3. Close the battery compartment lid.

Replace the battery compartment lid over the compartment and slide until it clicks.

- Attention**
- Do not drop the remote control unit.
 - Do not expose remote control unit to any liquid.
 - Do not use NiCd batteries.

■ Effective range of remote control operation

The remote control should normally be aimed at either the front or rear remote control receiver window on the projector (figure 1). Otherwise, it may also be aimed at the screen, which will reflect commands back to the projector's front receiver window as illustrated in figure 2.

The effective control range is approx. 30 m (98.4') from the beam receiver on the front or rear.

Figure 1

Figure 2

- Note**
- When the remote control is aimed at the screen, the effective control range may be reduced due to the optical loss by screen reflection.
 - The remote control may not function properly if an object is in the light path.
 - The remote control receiver may not function properly in intense ambient light such as fluorescent lamps. Carefully site the projector so its remote control receiver windows will not be directly exposed to intense light.

■ Setting projector ID number to remote control

Every projector has its ID number and the ID number of the controlling projector must be set to the remote control in advance so that the user can operate the remote control. **The ID number of the projector is set to “ALL” on shipping, and use the ID ALL button of the remote control when using only a single projector.**

Procedure of ID setting

Press the ID SET button, and within five seconds use the number (0 to 9) buttons to enter the 2-digit ID number set by the projector.

However, if the ID ALL button is pressed, the projector can be controlled regardless of the ID number of the projector (simultaneous control mode).

- Attention**
- Do not press the ID SET button accidentally or carelessly because the ID number on the remote control can be set even when no projector is around. If the ID SET button is pressed, the ID number goes back to the one set before pressing the ID SET button unless a numeric button is pressed within five seconds after the ID SET button is pressed.
 - Your specified ID number is stored in the remote control unit unless another one is specified later. However, the stored ID will be erased if the batteries of the remote control are left exhausted. When the dry cells are replaced, set the same ID number again.

■ Connect to the projector to use with a cable

When multiple main units are connected in the system, connect the units with the M3 stereo mini jack cable available in the market to simultaneously control the multiple main units with a single remote control unit through the REMOTE1 IN/OUT terminal. It is effective to use the wired remote control in the environment in which an obstacle stands in the light path or where devices are susceptible to outside light.

- Attention**
- Use two-core shielded cable of length smaller than 15 m (49.2'). If the cable length exceeds 15 m (49.2'), or if the shielding of the cable is inadequate, the operation may be unsatisfactory.

Installation

■ Projection schemes

Any of the following four projection schemes can be used depending on user's needs or viewing conditions. Use "OPTION2" menu (chosen from the MAIN MENU) to choose the appropriate projection scheme. (page 38)

■ Installation geometry

When planning the projector and screen geometry, refer to the figure below and the information on the next page for reference. After the projector is roughly positioned, picture size and vertical picture positioning can be finely adjusted with the powered zoom lens and lens tilt mechanism.

Side view

Top view

- Attention**
- Do not place or use one projector on top of another projection unit.
 - Leave a clearance of at least 50 cm (19.7") so that the ventilation opening on the rear panel will not be blocked. (page 63)

■ Projection distance by projection lens

Listed in the table below are the lens projection distances for the PT-D5700U (lens included), PT-D5700UL (lens sold separately), PT-DW5100U (lens included) and PT-DW5100UL (lens sold separately).

*1 The throw ratio is based on the value during projection onto an 80-inch screen size.

*2 The height position (H) of the ET-DLE050 is SH/2.

Installation

• PT-DW5100U, PT-DW5100UL

Screen aspect ratio 16:9

Unit : m, () : inch, [] : foot

*1 The throw ratio is based on the value during projection onto an 80-inch screen size.

*2 The height position (H) of the ET-DLE050 is SH/2.

■ Calculation formulas for projection distance by lens types

• PT-D5700U, PT-D5700UL

(L, LW, LT : m SD : inch)

Lens type		Aspect ratio	Projection distance (L) formula	
Standard zoom lens		4:3	Minimum (LW)	$L=0.0370 \times SD-0.0650$
			Maximum (LT)	$L=0.0488 \times SD-0.0638$
		16:9	Minimum (LW)	$L=0.0403 \times SD-0.0650$
			Maximum (LT)	$L=0.0532 \times SD-0.0638$
Wide-angle fixed-focus lens	Model No. : ET-DLE050	4:3		$L=0.0166 \times SD-0.0361$
		16:9		$L=0.0181 \times SD-0.0361$
Wide-angle zoom lens	Model No. : ET-DLE100	4:3	Minimum (LW)	$L=0.0276 \times SD-0.0452$
			Maximum (LT)	$L=0.0372 \times SD-0.0478$
		16:9	Minimum (LW)	$L=0.0301 \times SD-0.0452$
			Maximum (LT)	$L=0.0405 \times SD-0.0478$
Intermediate-focus zoom lens	Model No. : ET-DLE200	4:3	Minimum (LW)	$L=0.0504 \times SD-0.0657$
			Maximum (LT)	$L=0.0824 \times SD-0.0758$
		16:9	Minimum (LW)	$L=0.0549 \times SD-0.0657$
			Maximum (LT)	$L=0.0898 \times SD-0.0758$
Long-focus zoom lens	Model No. : ET-DLE300	4:3	Minimum (LW)	$L=0.0795 \times SD-0.1380$
			Maximum (LT)	$L=0.1232 \times SD-0.1310$
		16:9	Minimum (LW)	$L=0.0866 \times SD-0.1380$
			Maximum (LT)	$L=0.1342 \times SD-0.1310$
Ultra-long-focus zoom lens	Model No. : ET-DLE400	4:3	Minimum (LW)	$L=0.1176 \times SD+0.0244$
			Maximum (LT)	$L=0.1646 \times SD+0.0651$
		16:9	Minimum (LW)	$L=0.1281 \times SD+0.0244$
			Maximum (LT)	$L=0.1793 \times SD+0.0651$

• PT-DW5100U, PT-DW5100UL

(L, LW, LT : m SD : inch)

Lens type		Aspect ratio	Projection distance (L) formula	
Standard zoom lens		15:9	Minimum (LW)	$L=0.0402 \times SD-0.0650$
			Maximum (LT)	$L=0.0530 \times SD-0.0638$
		16:9	Minimum (LW)	$L=0.0409 \times SD-0.0650$
			Maximum (LT)	$L=0.0539 \times SD-0.0638$

			Maximum (LT)	$L=0.1951 \times SD-0.1352$
		16:9	Minimum (LW)	$L=0.1061 \times SD-0.1374$
			Maximum (LT)	$L=0.1983 \times SD-0.1352$

Note

- The dimensions in the table in pages 17-20 and the values obtained from the above formulas may contain slight errors.
- When an SXGA signal is input and projected, the right and left ends of the picture will be blanked and the aspect ratio will be 5:4.
- The brightness is different between the wide lens position settings and telephoto lens position settings.

Connection

■ Setup precautions

- Before connecting any of your video/audio equipment to the projector, carefully read the owners manual supplied with the equipment once again.
- All cable connections should be made with the entire system devices, including the projector, first turned off.
- Obtain commercial interconnecting cables for devices supplied with no accessory or optional interconnect cables.
- Video signals containing too much jitter may cause the images on the screen to randomly wobble or shake. Inserting a time base corrector (TBC) in the projector's video line will relieve this problem.
- The projector only accepts composite-video, S-Video, analog-RGB (with TTL sync. level) and digital signal.
- Some PC models are not compatible with PT-D5700U/PT-D5700UL/PT-DW5100U/PT-DW5100UL projectors.
- When using long cables to connect various equipment to the projector, there is a possibility that the image will not be output correctly unless a compensator is used.

- The pin assignments on the S-VIDEO IN terminal are as follows:

Viewed from mating side

Pin No.	Signal
①	Ground (luminance)
②	Ground (color)
③	Luminance signal
④	Color signal

- The pin assignments on the DVI-D input terminal are as follows (interface with DVI-D output terminal on PC):

Viewed from mating side

Pin No.	Signal	Pin No.	Signal
①	T. M. D. S data 2-	⑬	—
②	T. M. D. S data 2+	⑭	+5 V
③	T. M. D. S data 2 shield	⑮	Ground
		⑯	Hot plug sense
④	—	⑰	T. M. D. S data 0-
⑤	—	⑱	T. M. D. S data 0+
⑥	DDC clock	⑲	T. M. D. S data 0 shield
⑦	DDC data		
⑧	—	⑳	—
⑨	T. M. D. S data 1-	㉑	—
⑩	T. M. D. S data 1+	㉒	T. M. D. S clock shield
⑪	T. M. D. S data 1 shield		
⑫	—	㉓	T. M. D. S clock+
		㉔	T. M. D. S clock-

- The pin assignments on the RGB2 input terminal are as follows:

Viewed from mating side

Pin No.	Signal
①	R/P _R
②	G/G · SYNC/Y
③	B/P _B
⑬	HD/SYNC
⑭	VD

Pin ⑨ : Not used.

Pins ④-⑧, ⑩ and ⑪ : Ground

- The DVI-D input terminal supports single link only.
- EDID settings may be needed depending on the DVI equipment being connected. (page 37)
- The DVI-D input terminal can be used to connect to a DVI equipment, but note that images may not appear or the projector may not work properly when connected to certain DVI equipment.
- This projector supports HDCP.

■ Example of connecting with AV products

- Attention**
- When connecting with a video deck, be sure to use the one with a built-in time base corrector (TBC) or use a TBC between the projector and the video deck.
 - If nonstandard burst signals are connected, the image may be distorted. If this is the case, connect a TBC between the projector and the video deck.
 - The EDID settings may be needed depending on the equipment connected when DVI-D signals are input. (Refer to page 37.)

■ Example of connecting with PCs

- Note**
- For the specifications of the RGB signals that can be applied from the PC, see the data sheet on page 62.
 - If your PC has the resume feature (last memory), the computer may not function properly until the resume capability is disabled.
 - When the SYNC ON GREEN signal is input, do not input sync signals to the SYNC/HD and VD terminals.
 - The EDID settings may be needed depending on the equipment connected when DVI-D signals are input. (Refer to page 37.)

Projection

■ Powering up the projector

When using an optional lens, install a projection lens before powering up the projector. (Refer to page 26.)

Remove the lens cover beforehand.

- ① **Connect the supplied power cord.**
(120 V AC, 50 Hz/60 Hz)
- ② **Press the “I” marked side of the MAIN POWER switch to turn on the power.**
The power indicator lights up red, and the projector is placed in the standby mode.
- ③ **Press the “I” button. [on the main unit or the remote control]**
The power indicator illuminates in green and soon the image is projected on the screen.

Note

- If the projector is powered up at about 0 °C, a warm-up period of approximately five minutes may be necessary to start projection.
The temperature monitor (TEMP) lights during the warm-up period.
When the warm-up is completed, the temperature monitor (TEMP) turns off and the image is projected on the screen.
- If the surrounding temperature is very low and the warm-up period exceeds five minutes, the control determines it as an abnormal condition and turns off the power automatically. If this happens, raise the surrounding temperature to 0 °C or higher and then turn the main power “on” and turn the power “on” (|).

■ Making adjustment and selection

It is recommended that the projector be allowed to warm up for at least 30 minutes before any adjustments are made to the focus.

<Using the remote control>

- ④ **Press the FOCUS button to roughly adjust the focus of the lens.***
- ⑤ **Set the projection scheme in “INSTALLATION” setting. (page 38)**
- ⑥ **Select the input signal by pressing the input selector button to toggle through RGB1, RGB2, VIDEO, S-VIDEO and DVI-D.**
- ⑦ **Turn the feet, and adjust the tilt of the main unit in the front and rear or left and right.**
- ⑧ **Use the lens left/right adjustment dial to adjust the direction of the lens. (page 27)**
- ⑨ **Press the SHIFT button to adjust the “SHIFT”.***
- ⑩ **Press the AUTO SETUP button if the input signal is RGB/DVI signal. (page 27)**
- ⑪ **Press the ZOOM button to fit the image size to the screen size.***
- ⑫ **Press the FOCUS button again to adjust the “FOCUS”.***
- ⑬ **Press the ZOOM button again to adjust the “ZOOM” and fit the image size to the screen size.***

* When operating at the projector, please refer to page 26.

■ Powering off the projector

- ① Press the POWER STANDBY “⏻” button.
- ② Select “OK” with ◀ or ▶ button and press the ENTER button.
(Or press the POWER STANDBY “⏻” button again.)
The projection of the image stops, and the power indicator of the main unit lights up orange. (The cooling fan keeps running.)
- ③ Wait until the power indicator of the main unit turns to red (i.e., until the cooling fan stops).
- ④ Press the “○” marked side of the MAIN POWER switch to remove all power from the projector.

Attention • Do not turn the power supply off and then immediately back on again.
Turning on the power supply may not light up the light source lamp if the lamp is in the process of cooling down after turning off the power supply. To light up the lamp, turn on the power supply again when the lamp has been cooled sufficiently.
Turning on the power supply with the lamp in the hot condition may shorten the lamp life.

Note • The projector consumes approximately 10 watts of power even in standby mode after the cooling fan stops. (Power indicator lit in red.)
• If you re-power the projector after shutting off the main power inadvertently, the projection lamp may remain unlit. Please turn the main power on again after a while.

■ Direct power off function

The power supplied internally causes the cooling fan to continue operating and cool off in the event that the power has failed or even after the power cord is accidentally disconnected immediately after the power has been turned off.

- Note**
- When the lamp has been cooled by the direct power off function, it sometimes takes longer than usual for the lamp to light up again.
 - While the cooling fan is operating, do not place the projector inside a box or bag.

How to install and remove the projection lens

■ How to install the projection lens

- ① Align the guide of the projection lens with the guide groove in the main unit.
- ② Turn the lens clockwise until it clicks into place.

Attention • Turn the lens counterclockwise and confirm that the lens does not come off.

■ How to remove the projection lens

- ① Turn the lens counterclockwise as far as it will go.
- ② While holding down the lens release button, turn the lens further counterclockwise.
- ③ Remove the lens.

Note • Before replacing the lens, turn off the projector's power.
• Do not touch the lens signal contact. Dust or dirt may cause defective contact.
• Do not touch the surface of the projection lens with your bare hands.
• Store the replaced lens where it will be free from vibration and impact.

How to adjust the lens

■ How to adjust the FOCUS, ZOOM and SHIFT

The focus, zoom and up/down position of the images projected on the screen can be adjusted while the projector is positioned appropriately in relation to the screen.

■ At the projector

- ① Press **LENS** on the control panel on the main unit.

Pressing the button changes the setup screen in the order of "FOCUS", "ZOOM" and "SHIFT".

- ② Press **▲ ▼ ◀ ▶** to select an item and adjust it.

■ Using the remote control

- ① Press **LENS (FOCUS/ZOOM/SHIFT)** on the remote control.

When the FOCUS button is pressed :

The focus is adjusted.

When the ZOOM button is pressed :

The zoom is adjusted.

When the SHIFT button is pressed :

The shift is adjusted.

- ② Press **▲ ▼ ◀ ▶** to select an item and adjust it.

Caution

Be careful not to catch your fingers between the lens and shroud when shifting the lens.

Note

- When a lens without zoom functions is used, the lens zoom adjustment menu will still displayed, but no operations can be performed using the items on this menu.
- By shifting the lens up/down position, it is possible to make adjustments upward or downward from the standard position in the direction of the upper 50 % of the projected screen height. However, when using ET-DLE050 lens, the shift adjustment is not possible.
- Operations can be performed faster by holding down the **▲ ▼** buttons for about 3 or more seconds.
- Do not adjust the lens focus in the initial period (within 30 minutes) after switching on.
- A warm-up period of at least 30 minutes is recommended before using the projector.

Automatic adjustment (AUTO SETUP)

How to adjust the lens position to the left or right

When the lens left/right adjustment dial is turned clockwise, the screen moves toward the left; conversely, when it is turned counterclockwise, it moves toward the right. The maximum travel distance toward the left or right is about 10 % of the projection screen width.

Attention • Move the lens left/right adjustment dial to any position up to the maximum adjustment position to make the adjustment. Turning the dial with undue force may cause malfunctioning.

Automatic adjustment function adjust the resolution, clock phase and image position automatically when dots-structured analog RGB signals such as computer signal are supplied. (Automatic adjustment is not available if moving picture input signals or signals having a dot clock frequency of more than 150 MHz are supplied.) When DVI signals are input, the image position is adjusted automatically.

It is recommended to supply images with a bright white frame at the outermost periphery containing characters etc. that are clear in white and black contrast when the system is in automatic adjustment mode. Avoid supplying images that involve halftones or gradation such as photographs and computer graphics.

Note

- “CLOCK PHASE” may have been shifted even when the adjustment ended normally. In this case, manually adjust the “CLOCK PHASE”.
- Automatic adjustments cannot be performed when images with blurred edges or dark images are input. With Composite sync and G-SYNC sync signals and some types of PCs, it may not be possible to perform these automatic adjustments. In this case, manually adjust the items of “INPUT RESOLUTION”, “CLOCK PHASE” and “SHIFT”.
- Image may be disturbed for about 4 seconds during automatic adjustment, which is not an abnormal error.

Status function

This shows the projector status. It can also be used to send information about the projector’s status via E-mail.

- ① Press the STATUS button on the remote control.

STATUS	
INPUT	NTSC VIDEO
	15.73kHz/59.94Hz
PROJECTOR RUNTIME	33h
LAMP1	13h/ ON/
LAMP2	13h/ ON/
INTAKE-AIR TEMP.	25 °C / 77 °F
OPTICS MODULE TEMP.	37 °C / 98 °F
TEMP. AROUND LAMP	37 °C / 98 °F
MAIN VERSION	1.00.00
NETWORK VERSION	1.00
REMOTE2	DISABLE

ENTER SEND STATUS VIA E-MAIL
MENU EXIT

Using the SHUTTER function

If the projector is not going to be used for a certain period of time such as while a meeting is on a break or preparations are being made, the mechanical shutter can be used to hide the images temporarily.

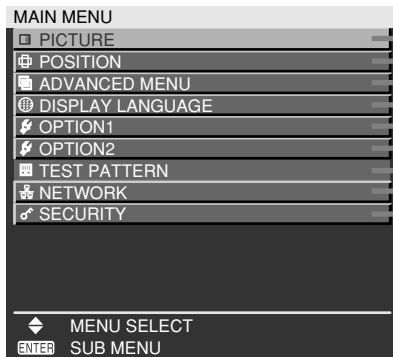

- ① Press the SHUTTER button of the remote control or the main unit.
The image is turned off.
- ② Press the SHUTTER button again.
The image comes back.

On-screen menus

■ Structure of menu screens

Menus are extensively used for configuring, adjusting or reconfiguring the projector.
The menu structure is as follows:

MAIN MENU

SECURITY (page 51)

NETWORK (page 41)

TEST PATTERN (page 40)

OPTION2 (page 38)

OPTION1 (page 35)

PICTURE (page 30)

For RGB signals

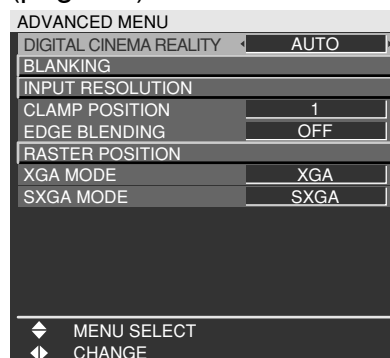

For DVI signals

For S-Video/Video/YPbPr signals

ADVANCED MENU (page 32)

POSITION (page 31)

DISPLAY LANGUAGE (page 34)

■ Basic menu operations

① Press the MENU button.

The MAIN MENU appears on the screen.

② Select (highlight) the desired item with the ▲ or ▼ button.

Selected items are displayed in yellow.

③ Press the ENTER button to enter your selection.

The submenu for the selected option will now open.
(e.g. : POSITION Menu)

④ Highlight the desired adjustment item with the ▲ or ▼ buttons, then change the parameter value with the ◀ or ▶ buttons.

(Example of separate adjustment screen)

- If no button is operated for approx. 5 seconds while a bar graph is displayed, the screen will return to the previous page.

■ Returning to the previous page

- Pressing the MENU button returns the screen to the previous menu page.
- When the MAIN MENU is on the screen, pressing the MENU button clears all menus from the screen.

■ Menu items shown in black characters

- Some menu items may not be valid for certain signal formats applied to the projector. The menu items that cannot be adjusted or used are shown in black characters, and they cannot be selected.

■ Menu items setting

- The bottom prompt line differs on each menu depending on the selected menu option:
 - A prompt “◀ ▶ CHANGE” appears when changing the setting.
 - A prompt “◀ ▶ ADJUST ” appears for a separate bar graph.

■ Resetting to the factory default

DEFAULT button is used to reset all of the projector adjustment values to the default levels which were set at the time of shipment from the factory.

PICTURE MODE

The picture mode can be selected from the following depending on viewing conditions and the video signal source in use:

- DYNAMIC** : Picture brightness/contrast ratio is increased to suit brighter viewing environments.
- GRAPHIC** : The picture becomes suitable for input from the personal computer.
- STANDARD** : The picture becomes suitable for moving images in general.
- CINEMA** : The picture becomes suitable for movie sources.
- NATURAL** : The picture becomes suitable for use in a dark room.

CONTRAST

“CONTRAST” is used to adjust the contrast ratio.

- ▶ : Raises the contrast ratio.
- ◀ : Lowers the contrast ratio.

BRIGHTNESS

“BRIGHTNESS” is used to adjust the black level.

- ▶ : Raises the picture brightness.
- ◀ : Lowers the picture brightness.

COLOR

(For S-Video/Video/YPbPr signals only)

- ▶ : Deepens colors.
- ◀ : Weakens colors.

TINT

(For S-Video/Video/YPbPr signals only)

“TINT” is used to adjust human skin.

- ▶ : Adjusts skin tone toward greenish color.
- ◀ : Adjusts skin tone toward reddish-purple.

COLOR TEMP

The color temperature is adjusted when the white areas of images take on a reddish or bluish hue.

DEFAULT : This is the standard setting.

USER : The RGB values of the white balance are set separately.

Press the ENTER button, select “WHITE BALANCE HIGH” or “WHITE BALANCE LOW”, and proceed with the detailed settings.

- ▶ : The colors of the selected item are darkened.
- ◀ : The colors of the selected item are lightened.

MIDDLE : The white areas take on a slightly reddish hue.

HIGH : The white areas take on a more bluish-white hue.

WHITE GAIN

The brightness of white parts of the image can be adjusted.

- ▶ : The intensity of white color increases.
- ◀ : Reverts to natural image.

SYSTEM DAYLIGHT VIEW

This adjusts the vividness of the projected images when the projector is used under bright lighting.

OFF : “SYSTEM DAYLIGHT VIEW” is disabled.

- 1 : Low
- 2 : Middle
- 3 : High

Adjusting the position

SHARPNESS

“SHARPNESS” is used to adjust the crispness of the image.

- ▶ : Sharpens the edge of the image.
- ◀ : Softens the edge of the image.

NOISE REDUCTION

In this mode, the video noise is reduced.

- OFF : No correction
- 1 : Low
- 2 : Middle
- 3 : High

AI

Gray scale control is exercised to suit the images, and optimal images with a clear contrast are projected.

- ON : AI compensation is enabled.
- OFF : AI compensation is disabled.

SYSTEM SELECTOR

Set this according to the connected signal system.

(S-Video/Video terminal input signal)

AUTO : This is the standard setting. The received signal system is automatically identified.

Note • When signal deterioration or other factors prevent images from being displayed correctly with the “AUTO” setting, change the setting to match the connected signal system.

(RGB1/RGB2 terminal input signals)

AUTO : This is the standard setting. The received signal system is automatically identified.

When VGA60/480p signals are input

When other than VGA60/480p are input

For the signals which are supported, refer to page 62.

SHIFT

The position where the images are displayed can be moved here.

- ◀ ▶ : The position is moved horizontally.
- ▲ ▼ : The position is moved vertically.

ASPECT

AUTO : (For S-Video/Video signals only)

At this setting, when S1 video signals*1 are identified as being input to the S-Video connector or video ID signals are identified as being input to the video connector, the images are displayed after automatically being converted to the 16:9 aspect ratio.

16:9 : At this setting, when standard signals*2 are input, the images are converted to the 16:9 aspect ratio and displayed. When wide-screen signals*3 are input, the images are displayed with their inherent aspect ratio intact.

4:3 : At this setting, when standard signals*2 are input, the images are displayed with their inherent aspect ratio intact. When wide-screen signals*3 are input, they are converted by the PT-D5700U/PT-D5700UL to the 4:3 aspect ratio and displayed. With the PT-DW5100U/PT-DW5100UL, the images are reduced in size and displayed without converting their aspect ratio so that they will fit onto a screen with a 4:3 aspect ratio.

S4:3 : Select this setting when using a 16:9 screen.

H FIT : Pictures are displayed using all the panel pixels in the horizontal direction. When a signal has an aspect ratio taller than that of the panel pixel*4, the image will be displayed with the top and bottom portions cut off.

V FIT : Pictures are displayed using all the panel pixels in the vertical direction. When a signal has an aspect ratio wider than that of the panel pixel*4, the image will be displayed with the left and right sides cut off.

HV FIT : The image is displayed on all the panel pixels*4. When the aspect ratio of the input signal is different from that of the panel pixel*4, the signal is transformed to the aspect ratio of the panel pixel*4 and then displayed.

*1 S1 video signals are 16:9 video signals to which is added the detection signal output from the video deck or other unit which supports the wide-screen format.
 *2 Here, the standard signal means 4:3 or 5:4 input signals.
 *3 Here, the wide-screen signals means 16:9, 15:9 or 15:10 input signals.
 *4 Panel pixel aspect ratio is 4:3 in the case of PT-D5700U/PT-D5700UL and 15:9 for PT-DW5100U/PT-DW5100UL.

Attention • If you choose an aspect ratio that does not match the source video's aspect ratio, you will see a picture with an aspect ratio not the same as that of the original picture. Choose the appropriate aspect ratio carefully to match that of the original picture.

(Continued on the next page)

Adjusting the position

Note

- If the picture size is compressed or enlarged by using the 16:9 aspect ratio when the projector is used for profitable purpose or in the presence of an audience (for example, in a coffee shop or at a hotel etc.), it may infringe the rights of the copyright owner of the original picture.
- If a picture with the standard (4:3) aspect ratio is projected at a wide aspect ratio, parts of the picture may run over the screen bounds or the overall picture may be distorted. To view the picture at its original aspect ratio, choose the standard 4:3 aspect ratio.

ZOOM

This enables the enlargement ratio to be changed and the resulting enlarged image displayed.

- ◀ ▶ : The enlargement ratio in the horizontal direction is changed.
- ▲ ▼ : The enlargement ratio in the vertical direction is changed.

CLOCK PHASE

(For RGB/YPbPr signals only)
Clock phase adjustment allows the user to minimize visible noise with the ◀ or ▶ button.

Note

- When projecting signals whose dot clock frequency is 150 MHz or higher, the noise may not disappear even when the clock phase is adjusted.
- Clock phase adjustment is not available for digital signals.

KEYSTONE

KEYSTONE : Keystone distortion can be corrected only along either horizontal bound of the picture.

Note

- Keystone distortion can be corrected to $\pm 30^\circ$ of the angle of tilt for the projector. However, the greater the correction amount, the more the picture quality will deteriorate, and the harder it will become to achieve a good level of focus. To obtain the best picture quality, set up the projector and screen in such a way that the amount of keystone correction required is as minimal as possible.
- The picture size will also change when correction of keystone distortion is carried out.

LINEARITY : After you are finished with keystone adjustment, adjust vertical linearity with the ◀ or ▶ button.
Linearity is not adjustable if no correction was made to keystone distortion.

How to use ADVANCED MENU

DIGITAL CINEMA REALITY

Increase the vertical resolution when the S-Video/ Video signal input or 480i, 576i, 1080/60i or 1080/50i signal input is applied.

AUTO : Performs automatic detection and cinema processing. (factory default)

OFF : Unforced cinema processing

25p FIXED:

Forced cinema processing (2:2 pulldown) is performed when a PAL and SECAM, or 576i or 1080/50i signal is input.

30p FIXED:

Forced cinema processing (2:2 pulldown) is performed when a NTSC, 480i or 1080/60i signal is input.

Note

- In "DIGITAL CINEMA REALITY", the image quality will be deteriorated if "30p FIXED" or "25p FIXED" is selected when the signal is not a 2:2 pulldown signal. (The vertical resolution will be deteriorated.)

BLANKING

You can perform fine adjustments for blanking if noise appears at the ends of the screen or the image protrudes out of the screen during image projection using a video deck and so on.

▲ ▼ : Select the UPPER, LOWER, LEFT or RIGHT adjustment.

◀ ▶ : Adjust the blanking width.

For upper adjustment

For lower adjustment

For left adjustment

For right adjustment

■ INPUT RESOLUTION

Input resolution adjustment achieves the best image when the screen flickers or halo is observed around the contour.

▲ ▼ : These select the items listed below.

◀ ▶ : These select the value.

“TOTAL DOTS”, “DISPLAY DOTS”, “TOTAL LINES” and “DISPLAY LINES”

Each item automatically displays a value in response to the type of the input signal. If vertical stripes appear on the screen or the image is partly missing, increase or decrease the displayed value while observing the screen to achieve the optimal value.

Note

- The abovementioned vertical stripes will not appear on the screen when all white signals are input.
- The picture may be distorted during the adjusting operation, but this is not a fault.
- The input resolution can be adjusted only when RGB signal input is applied with RGB1 and RGB2 IN.
- Automatic adjustment is not available if signals having a dot clock frequency of more than 150 MHz are supplied.

■ CLAMP POSITION

(For RGB/YPbPr signals only)

Use the clamp position adjustment to achieve the optimal value when dark areas of the image are crushed or displayed in green.

Adjust with the ◀ ▶ buttons.

The value changes from 0 to 255.

The optimal value for the clamp position adjustment

- If dark areas are crushed:
 - The optimal value is the point where the dark area is best improved.
- If the dark areas are displayed in green:
 - The optimal value is the point where the green area becomes dark and clear.

Note

- The clamp position can be adjusted only when the RGB signal input is applied with RGB1 and RGB2 IN.

■ EDGE BLENDING

This projector has the function to hide the seams for multi-screens.

① Press ▲ ▼ to select “EDGE BLENDING”.

② Press ◀ ▶ to switch “EDGE BLENDING”.

OFF : When the multi-screens are not going to be used.

ON : When using “EDGE BLENDING” function.

③ Press the ENTER button.

The “EDGE BLENDING” screen will be displayed.

④ Press ▲ ▼ to specify the area to be adjusted.

- To joint the top : set “UPPER” to “ON”.
- To joint the bottom : set “LOWER” to “ON”.
- To joint the left : set “LEFT” to “ON”.
- To joint the right : set “RIGHT” to “ON”.

⑤ Press the ENTER button to toggle “ON” and “OFF”.

⑥ Press ◀ ▶ to adjust the compensation width and start position.

<To display the adjustment Marker>

⑦ Press ▲ ▼ to select “MARKER”.

⑧ Press the ENTER button to select “ON”.

A marker for adjusting the picture position appears. The optimal point is the position where the red line of one frame overlaps the green line of the other frame. However, depending on the installation environment or the lens to be used, dot-misalignment may occur. The correction widths of the jointed frames must be the same value all the time. The optimal joint cannot be achieved if the jointed frames have different correction widths.

⑨ Press ▲ ▼ to select “BRIGHT ADJUST”.

⑩ Press the ENTER button.

The “BRIGHT ADJUST” screen will be displayed.

⑪ Press ▲ ▼ to select “BRIGHT INSIDE”.

⑫ Press the ENTER button.

The “BRIGHT INSIDE” adjustment screen will be displayed.

When “INTERLOCKED” is set to “OFF”, individual adjustment of “R”, “G” and “B” will be possible.

(Continued on the next page)

How to use ADVANCED MENU

- ⑬ Press ▲ ▼ to select an item, and press ◀ ▶ to adjust the setting.

Once adjustment is complete, press the MENU button to return to “BRIGHT ADJUST”.

- ⑭ Press ▲ ▼ to select the part of “UPPER”, “LOWER”, “RIGHT”, “LEFT”.

- ⑮ Use ◀ ▶ to adjust the width for correcting the “BRIGHT INSIDE” setting (0 to 255).

- ⑯ Press ▲ ▼ to select “BRIGHT OUTSIDE”.

- ⑰ Press the ENTER button.

The “BRIGHT OUTSIDE” adjustment screen will be displayed.

When “INTERLOCKED” is set to “OFF”, individual adjustment of “R”, “G” and “B” will be possible.

- ⑱ Press ▲ ▼ to select an item, and press ◀ ▶ to adjust the setting.

Note

- The “BRIGHT ADJUST” is a function for making the brightening of the bright level in those areas where the pictures overlap less conspicuous when multi-screens have been configured using “EDGE BLENDING”. The optimal point is where, after the “BRIGHT INSIDE” has been adjusted, the compensation amount is the same for the bright levels in the areas where the pictures overlap and where the pictures do not overlap. If, after the “BRIGHT INSIDE” adjustment, only the vicinity of the borders of the areas where the pictures overlap and where the pictures do not overlap becomes bright, proceed to adjust the top, bottom, left and right widths. Alternatively, if only the vicinity of the borders has darkened as a result of the width adjustments, proceed with the “BRIGHT OUTSIDE” adjustment.
- When a rear screen or screen with a high gain is used, the joints may appear to be discontinuous depending on the viewing position.
- When any setting other than “OFF” has been selected for “EDGE BLENDING”, the “AI” is not adjustable.

■ RASTER POSITION

When the whole area where the input picture can be displayed is not used, the picture can be moved to any position inside the display area.

◀ ▶ : These adjust the value in the horizontal direction.

▲ ▼ : These adjust the value in the vertical direction.

■ XGA MODE

This mode takes effect only when XGA (RGB) signals are input.

XGA : This is the standard setting.

WXGA : Select this mode when WXGA signals are input.

■ SXGA MODE

This mode takes effect only when SXGA (RGB) signals are input.

SXGA : This is the standard setting.

SXGA+ : Select this when the screen is cut off.

Changing the display language

Menus, setting items, adjustment screens, and control button names will be displayed in the language the user chooses.

The available languages are:

ENGLISH, DEUTSCH, FRANÇAIS, ESPAÑOL, ITALIANO, 日本語, 中文, РУССКИЙ, 한국어.

Note

- The projector’s on-screen display is set to the English language by default.

■ COLOR MATCHING

When multiple sets are used simultaneously, this projector allows the user to correct the difference of colors among the sets.

① Press ▲ ▼ to select “COLOR MATCHING”.

② Press ◀ ▶ to switch “COLOR MATCHING”.

The setting will change as follows each time ◀ ▶ is pressed.

OFF : Color matching adjustment is not carried out.

3COLORS : It is possible to adjust the 3 colors of “R (Red)”, “G (Green)” and “B (Blue)” and “Wh (White)”*.
* When “3COLORS” is selected, only the brightness can be adjusted for “Wh”.

7COLORS : It is possible to adjust the 7 colors of “R (Red)”, “G (Green)”, “B (Blue)”, “Cy (Cyan)”, “Mg (Magenta)”, “Ye (Yellow)” and “Wh (White)”.

MEASURE : Refer to “Adjusting the color matching using a colorimeter” on the right for details on these modes.

If “3COLORS” or “7COLORS” was selected in step 2.

③ Press the ENTER button.

The “COLOR MATCHING: 3COLORS” or “COLOR MATCHING: 7COLORS” screen will be displayed.

④ Press ▲ ▼ to select “R”, “G”, “B” and “Wh”.

(“R”, “G”, “B”, “Cy”, “Mg”, “Ye” and “Wh” when selecting “7COLORS”.)

⑤ Press the ENTER button.

⑥ Press ◀ ▶ to adjust the values.

These values can be adjusted from 0 to 2048.
(If the default value of the color is 2048, the value can be adjusted from 256 to 2048.)

Note

- The effects of correcting the adjustment color
When tuning the correction color that is the same as the adjustment color : The brightness of the adjustment color changes.
When tuning the correction color RED : RED is added to or reduced from the adjustment color.
When tuning the correction color GREEN : GREEN is added to or reduced from the adjustment color.
When tuning the correction color BLUE : BLUE is added to or reduced from the adjustment color.
- This adjustment should be carried out by a person who is familiar with the projector or by a service person because a high level of skill is required to make successful adjustment.
- Pressing the DEFAULT button will restore the factory defaults for all items.
- When any setting other than “OFF” has been selected for “COLOR MATCHING”, “AI”, “COLOR CORRECTION” and “COLOR TEMP” settings are not adjustable.
- When “AUTO TESTPATTERN” is set to “ON”, the test pattern for adjusting the adjustment color is automatically displayed.

■ Adjusting the color matching using a colorimeter

The “R (Red)”, “G (Green)”, “B (Blue)”, “Cy (Cyan)”, “Mg (Magenta)”, “Ye (Yellow)” and “Wh (White)” colors can be changed to the desired hues using a colorimeter which is capable of measuring the chromaticity coordinates and luminance.

Inputting the current luminance and chromaticity coordinates

① Press ▲ ▼ to select “COLOR MATCHING”.

② Press ◀ ▶ to select “MEASURE”.

③ Press the ENTER button.

The “COLOR MATCHING:MEASURE” screen will be displayed.

④ Press ▲ ▼ to select “MEASURED DATA”.

⑤ Press the ENTER button.

The “MEASURED DATA” screen will be displayed.

⑥ Use the colorimeter to measure the luminance (Y) and chromaticity coordinates (x, y).

⑦ Press ▲ ▼ to select the colors, and press ◀ ▶ to select their values.

(Continued on the next page)

OPTION1 settings

- ⑧ After all the data has been input, press the MENU button.

The "COLOR MATCHING:MEASURE" screen will be displayed.

Inputting the coordinates of a desired color

- ⑨ Press ▲ ▼ to select "TARGET DATA".

- ⑩ Press the ENTER button.

The "TARGET DATA" screen will be displayed.

- ⑪ Press ▲ ▼ to select the desired colors, and press ◀ ▶ to input their coordinates.

- ⑫ After all the data has been input, press the MENU button.

Note

- If the target data is outside the color range of the projector, the colors will not be projected correctly.
- When "AUTO TESTPATTERN" is set to "ON", the test pattern for adjusting the adjustment color is automatically displayed.
- Set "PICTURE MODE" to "DYNAMIC" when measuring the measured data using a colorimeter or other measuring device.
- Depending on the measuring device being used and the environment in which measurements are made, discrepancies sometimes occur in the color coordinates of the target data and the values given by the measuring device.

COLOR CORRECTION

OFF : This is the standard setting.

USER : The six colors of red, green, blue, cyan, magenta and yellow can be adjusted and registered for each of four signal systems: Video, S-Video, RGB and YPbPr.

Press the ENTER button to make the detailed settings.

The current signal system is displayed.

CONTRAST MODE

There are two modes for adjusting to the operating environment.

NORMAL : The brightness is set to maximum.

HIGH : The contrast is set to maximum.

AUTO SIGNAL

The position where the screen is displayed can be adjusted automatically without pressing the AUTO SETUP button on the remote control each time signals are input when signals are input frequently such as when the projector is used at a conference.

ON : Auto setup is performed automatically when the video signals of the images being projected have changed.

OFF : The input auto setup function is set to OFF.

BACK COLOR

You can set the colors of the screen when no signal is input to the projector.

BLUE : Set screen color to blue.

BLACK : Set screen color to black.

LOGO1 : The picture registered by the user will be projected.

LOGO2 : The Panasonic logo is projected.

STARTUP LOGO

This sets the startup logo that is projected when the power is turned on.

LOGO2 : This is the standard setting. The Panasonic logo is projected.

NONE : "STARTUP LOGO" is disabled.

LOGO1 : The picture registered by the user will be projected.

Note

- Separate software is required in order to create the pictures to use for "LOGO1". Consult your dealer.

SUB MEMORY LIST

Multiple sets of image adjustment data (PICTURE, POSITION, ADVANCED MENU adjustment values) for the same kind of signal can be registered.

Registering in sub memory

- ① Select the sub memory number to be registered using the ▲ ▼ buttons.
- ② Press the ENTER button.

Note • Sub memories range from 1 to 8.

How to select sub memory

- ① Select sub memory number (1 to 8) using the ▲ ▼ buttons. Select “–” if you do not wish to use the sub memory.
- ② Press the ENTER button.

Note • You cannot select sub memory of a different signal system.

How to erase sub memory

- ① Select sub memory number (1 to 8) corresponding to sub memory to be erased using ▲ ▼ buttons.
- ② Press the DEFAULT button.
- ③ Read the confirmation message and select.

■ DVI EDID

When the projector and external equipment are connected by DVI connection but a proper image cannot be obtained, switch this setting.

EDID1

Select this mainly when external equipment (DVD player, etc.) that outputs movie video signals is connected to the DVI terminal.

EDID2:PC

Select this mainly when external equipment (personal computer, etc.) that outputs still image video signals is connected to the DVI terminal.

Mode	EDID data
EDID1	480p, 576p, 1080/60i, 1080/50i, 720/60p, 720/50p, 1080/60p, 1080/50p
EDID2:PC	VGA60, SVGA60, XGA50, XGA60, XGA70, XGA75, XGA85, WXGA768/50*, WXGA768/60*, SXGA60

* PT-DW5100U, PT-DW5100UL only

- Note** • The optimum setting differs according to the connected external equipment. Be sure to check the operating instructions for the external equipment, etc.
- Depending on the setting, some equipment may not provide images or otherwise operate properly.

■ DVI SIGNAL LEVEL

When the projector and external equipment are connected by DVI connection but a proper image cannot be obtained, switch this setting.

0-255:PC

Select this mainly when connecting external equipment (personal computer, etc.) using the DVI terminal output.

16-235

Select this mainly when connecting external equipment (DVD player, etc.) using the HDMI terminal output with a conversion cable, etc.

- Note** • The optimum setting differs according to the connected external equipment. Be sure to check the operating instructions for the external equipment, etc.
- Depending on the setting, some equipment may not provide images or otherwise operate properly.

■ FUNC1

The user can set the function for the remote control's FUNC1 button.

SYSTEM SELECTOR:

The button functions in the same way as “SYSTEM SELECTOR” of “PICTURE”.

SYSTEM DAYLIGHT VIEW:

This button has the same functions as “SYSTEM DAYLIGHT VIEW” of “PICTURE”.

SUB MEMORY LIST:

This button has the same functions as “SUB MEMORY LIST” of “OPTION1”.

■ OSD POSITION

The user can specify the position of the on-screen menu indications.

■ OSD MEMORY

This lets you save the cursor position in on-screen menus.

ON : The cursor position is saved.

OFF : The cursor position is not saved.

- Note** • Even when this is set to “ON”, the cursor position is not saved if the main power of the projector is turned off.

OPTION2 settings

OPTION2	
PROJECTOR ID	ALL
INSTALLATION	FRONT-FLOOR
ALTITUDE	LOW
DIRECTION	HORIZONTAL
LAMP SELECT	DUAL
LAMP RELAY	OFF
LAMP POWER	HIGH
RS-232C	
SYSTEM INFORMATION	
AUTO POWER OFF	DISABLE
DATE AND TIME	
PASSWORD	
◆ MENU SELECT	
◆ CHANGE	

PROJECTOR ID

The projector has an ID number setting function that helps the user to control two or more projectors either simultaneously or separately with a single remote control. **The ID number is set to "ALL" by default. Hence the ID number need not be set when only one projector is used.**

1 – 64 : The ID number is set in this range.

Note

- The ID number can be set to "ALL", or selected from "1" to "64".
- If the projectors are given ID numbers, their remote controls must be assigned the same ID numbers, respectively.
- If the ID number of a projector is set to "ALL", it can be controlled by the remote control or the PC with any ID number.

If multiple projectors are used and some of them have their IDs set to "ALL", they cannot be controlled separately from the projectors with other ID numbers.

For details on remote control ID setting, see page 15.

INSTALLATION

Switch this setting according to the projector installation method.

FRONT-FLOOR

FRONT-CEILING

REAR-FLOOR

REAR-CEILING

ALTITUDE

The fan can be controlled in accordance with the operating conditions.

LOW : This is the standard setting.

HIGH : This is selected when using the projector at an altitude of over 1 400 m (4 593.2').

DIRECTION

The fan can be controlled in accordance with the direction in which the images are to be projected.

HORIZONTAL: This is the standard setting.

VERTICAL : This is selected when projecting images at a significant angle toward the vertical (more than 30 degrees from the horizontal).

H: HORIZONTAL
V: VERTICAL

Attention

- Select the correct "DIRECTION" setting in accordance with the direction in which the images are to be projected. Using the projector at the wrong "DIRECTION" setting will shorten the service life of the lamps.

■ LAMP SELECT

“LAMP SELECT” is used to choose from “SINGLE” and “DUAL” modes depending on user’s needs or viewing conditions.

In “SINGLE” mode, the projector may automatically select either lamp from the 2 lamps, or the particular lamp can be specified.

DUAL : Two lamps are used simultaneously.

SINGLE : One of either lamps is used (lamp with shorter operating hours is automatically selected).

LAMP1 : Lamp Unit 1 is always used.

LAMP2 : Lamp Unit 2 is always used.

When one of the above settings is selected, it will take effect after the ENTER button is pressed.

Note

- If, in the “SINGLE”, “LAMP1” or “LAMP2” mode, one lamp remains off or the currently active lamp exceeds 2 000 hours of cumulative operating time (when “HIGH” is selected as the “LAMP POWER” setting), the other lamp will light. If, in the “DUAL” mode, one lamp remains off or the currently active lamp exceeds 2 000 hours of cumulative operating time (when “HIGH” is selected as the “LAMP POWER” setting), the other lamp alone will light.

However, if both lamps remain off or the 2 000 hours of cumulative operating time (when “HIGH” is selected as the “LAMP POWER” setting) are exceeded, the projector will enter the standby mode.

- The colors of the items indicate the status.
 - Green → Current setting
 - Yellow → Current setting (when a lamp fails or fails to light)
 - Red → Lamp that has failed to light
 - White → Any other status
- If the projector is repeatedly used for short periods of time, the lamps will need to be replaced more frequently.

■ LAMP RELAY

If using the projector for a continuous period of 24 hours or more, this setting can be used to automatically switch the lamps that are turned on in order to reduce the lamp deterioration that can occur as a result of continuous use.

OFF : This is the standard setting. “LAMP RELAY” is disabled.

00:00 - 23:00

: This can be set in one hour intervals from 00:00 to 23:00.

Note

- Only when “DUAL” or “SINGLE” is selected in “LAMP SELECT”, “LAMP RELAY” is active. If “LAMP1” or “LAMP2” is selected, “LAMP RELAY” function is not available.
- When “DUAL” is selected in “LAMP SELECT”, only one lamp will light for a 4-hour period after the set time.
- When “SINGLE” is selected in “LAMP SELECT”, the lamp that was off at the set time will light, and then the lamp that was lighted until the set time will turn off.
- The setting time will be the local time. (page 40)

■ LAMP POWER

The luminance of the projection lamp can be changed depending on user’s needs or the viewing conditions.

HIGH : Set when high brightness is necessary.

LOW : Set when high brightness is not necessary.

Note

- When set to “LOW”, it is possible to reduce power consumption, reduce operating noise and extend lamp service life.

■ RS-232C

This sets the communication parameters at the serial terminals.

For details on the serial terminals, refer to “Using the serial terminals” (page 52).

(IN) BAUDRATE : 9600, 19200 or 38400 is selected.

(IN) PARITY : NONE, EVEN or ODD is selected.

(OUT) BAUDRATE: 9600, 19200 or 38400 is selected.

(OUT) PARITY : NONE, EVEN or ODD is selected.

VPS SYSTEM : MASTER or SLAVE is selected.

GROUP : A to Z is selected. MASTER or SLAVE is also selected.

OPTION2 settings

SYSTEM INFORMATION

The projector's system information can be viewed.

SYSTEM INFORMATION	
MAIN VERSION	1.00.00
NETWORK VERSION	1.00
PROJECTOR RUNTIME	300h
LAMP1 LOW	100h
HIGH	200h
TOTAL	300h
LAMP2 LOW	100h
HIGH	200h
TOTAL	300h
LAMP1 ON	20
LAMP2 ON	20
MENU RETURN	

AUTO POWER OFF

The projector can be automatically set to the standby mode if no signals are input for the set duration.

DISABLE:

This is the standard setting. This function is set to OFF.

45MIN. – 90MIN.:

The duration can be set in 15-minute increments from 45 to 90 minutes.

DATE AND TIME

This lets you set the time zone and the current date and time for the projector's internal clock.

TIME ZONE

: Set the time zone of your country.

ADJUST CLOCK

: Set the current date and time.

LOCAL DATE/LOCAL TIME

: Date and time set in above are displayed.

PASSWORD

This function is used by a service person.

Input the password with the numeric buttons (0 to 9) of the remote control and press the ENTER button to confirm the entry.

Displaying the internal test pattern

The projector has eight types of internal test patterns to check the condition of the set.

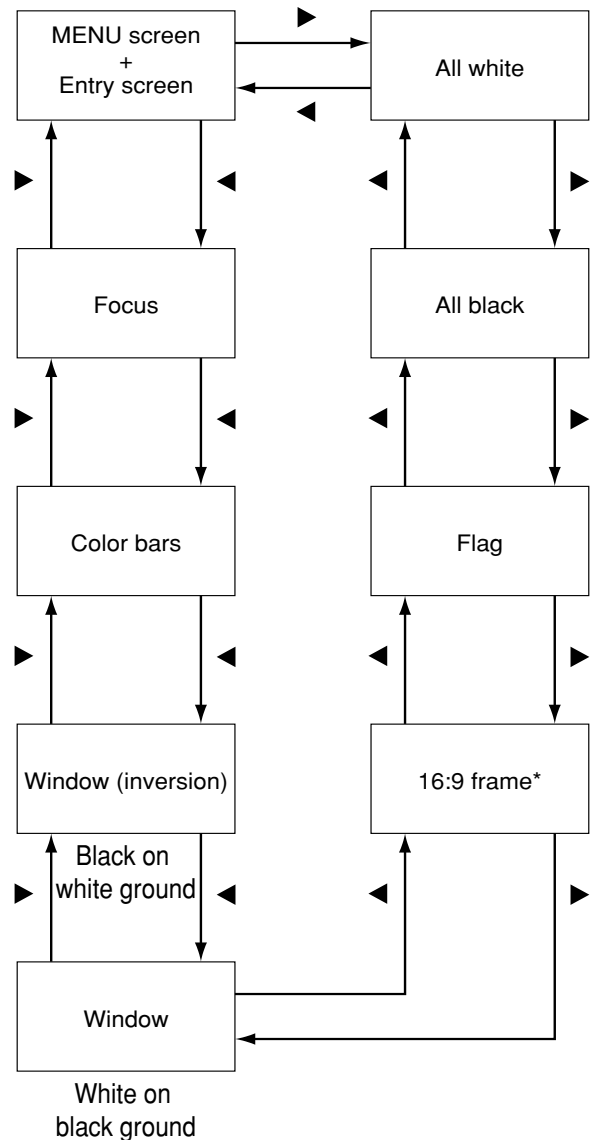

To display test patterns, follow the steps below.

Press the TEST PATTERN button on the remote control.

Or select "TEST PATTERN" in the MAIN MENU and search through the various types of test patterns by using ◀ ▶ buttons.

Note • Results of adjustment on the image, picture quality, position, size and other factors will not be reflected in test patterns. Be sure to display the input signal before performing various kinds of setting.

Cycle of displayed internal test patterns

* The PT-DW5100U and PT-DW5100UL support the 4:3 frame format.

Setting the network

The settings required for the network must be established in order to use the Web browser (page 42) functions that the PC uses to control the projector.

NETWORK	
HOST NAME	PROJECTOR
DHCP	OFF
IP ADDRESS	192.168. 0. 8
SUBNET MASK	255.255.255. 0
GATEWAY	192.168. 0. 1
NETWORK STATUS	
STORE	
◆ MENU SELECT	
ENTER ADJUST	

- HOST NAME** : Make alteration if necessary when to use the DHCP server.
- DHCP** : Set the DHCP item to ON when to acquire an IP address automatically using the DHCP server. Set to OFF if DHCP server is not used.
- IP ADDRESS** : Enter the IP address if DHCP server is not used.
- SUBNET MASK** : Enter the subnet mask if DHCP server is not used.
- GATEWAY** : Enter the gateway address if DHCP server is not used.
- NETWORK STATUS**: Displays the network status of the unit such as DHCP or IP ADDRESS.
- STORE** : The settings are stored in the memory.

- Attention**
- Before using the DHCP server, make sure the DHCP server is already functioning.
 - For details of IP address, subnet mask, and gateway, ask the network administrator.

Returning the network function setting back to the factory setting

The user can return all settings of network function such as IP address, password and E-mail setting to the factory setting.

- 1 Press ▲ ▼ to select “STORE”.
- 2 Hold down the DEFAULT button for 3 seconds.

A confirmation screen will be displayed. To cancel, press the MENU button. The “NETWORK” screen will be displayed.

- 3 Press the ENTER button.

Connecting the PC

System requirements

The following system specifications are required in order to use the networking functions.

• PC

- OS : Windows XP/2000/Me (Millennium Edition)/98SE (Second Edition)
- CPU : Pentium III processor or faster
- RAM : 64 MB or more (128 MB or more for Windows XP/2000)
- Web browser: Internet Explorer 6.0 or newer, Netscape Communicator 7.0 or newer

• LAN cable

- Type : Category 5 compatible straight cable
- Length: 100 m (328.1') or less

- Attention**
- If you want to use the E-mail function, make sure the system can handle E-mail.

Operation is not guaranteed for all computers that meet the above conditions.

Connection example

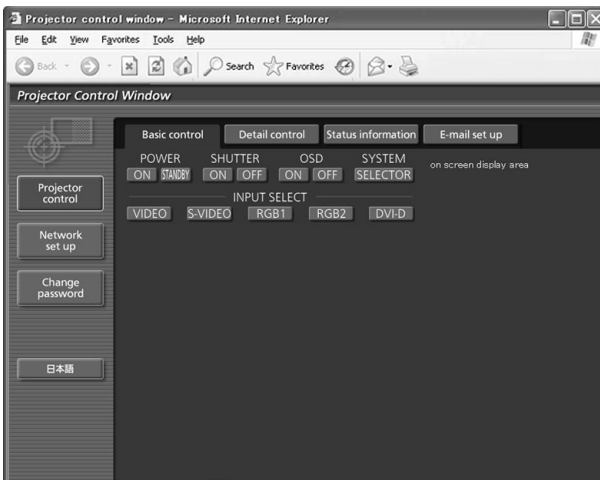

- Attention**
- Touching the LAN terminal with your hand (or body) when you are carrying a static charge may damage the equipment due to a discharge of static electricity. Therefore, be careful not to touch the LAN terminal or metal parts of the LAN cable.
 - Please connect the LAN cable to indoor devices.

Using Web Browser Control

This projector has networking functions which allow it to be controlled through a Web browser on a PC. The controlled items are:

- Projector's settings and adjustment
- Projector's status display
- Transmission of a E-mail message when the projector has a problem

■ Accessing from the Web browser

① Start the Web browser on your PC, then enter the IP address which was set in the projector.

② Enter “user1” in the user name field, then enter the password in the password field.

The default setting is “panasonic” (all lower case). If you have changed the password, enter the new password here.

The host name set in the projector is displayed in the “Realm” field.

③ Click [OK].

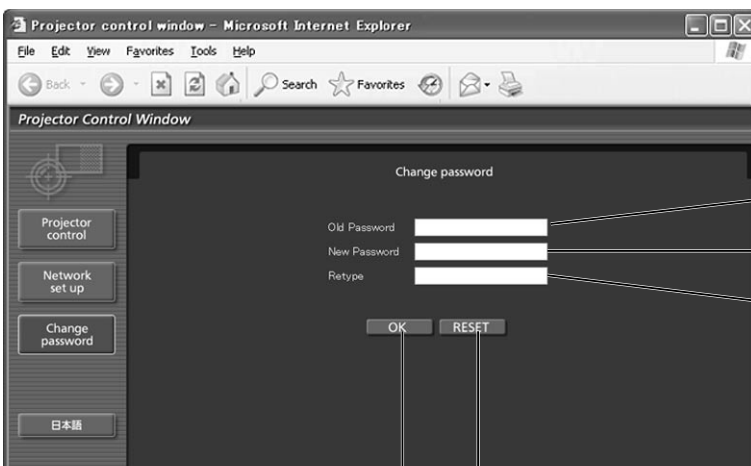

The Basic Control page is displayed.

Note

- Avoid activating two or more Web browser simultaneously to work out setting or control actions.
- Change the password first of all.

■ Password change page

Click [Change password].

Old password input field

New password input field

New password input field (re-enter for confirmation)

Button for erasing all entered characters

Button for executing password change

■ Basic control page

This page is the first page displayed when the projector is accessed through a Web browser. To move from another page, click [Projector control], then [Basic control].

Control button

Click this item, and a projector control page appears.

Monitor information button

Click this item, and the status of the projector is displayed.

E-mail set up button

Click this item, and an E-mail setting page appears.

POWER: Power On/Off control

SHUTTER: Shutter control

OSD (On-screen Display): display/non-display

SYSTEM: Signal System Switching

Use these to select the input signals.

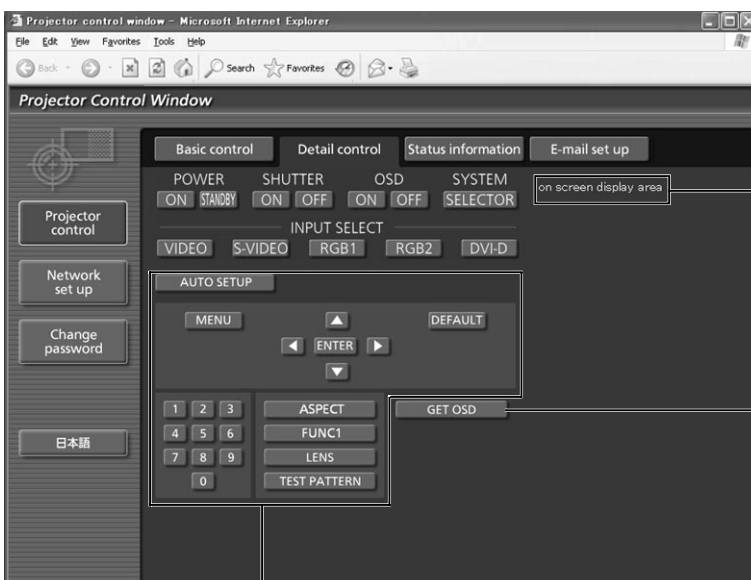

Network set up button

Click this item, and a network set up page for IP address and other items appear.

Change password button

■ Detail control page

Click [Projector control], then [Detail control] to display the Detail control page.

On-screen status is displayed, even if the on-screen of projector is set to off.

This button updates the on-screen description on the right of the control page with the latest information.

Pressing these buttons controls the projector and updates the on-screen description on the right of the control page when control is finished.

Using Web Browser Control

■ Monitor information page

Click [Projector control], then [Status information] to display the Status information page. This page displays the projector statuses established for the items shown below.

The screenshot shows the 'Status information' tab of the Projector Control Window. The following table represents the data displayed in the interface:

POWER	ON	STANDBY	REMOTE 2	ENABLE	DISABLE
SHUTTER	ON	OFF	OSD	ON	OFF
LAMP SELECT	DUAL		LAMP POWER	HIGH	
INPUT	RGB1 XGA60 (48.45kHz/60.18Hz)				
INPUT AIR TEMPERATURE	10° C / 50° F	[Progress Bar]			
OPTICS MODULE TEMPERATURE	37° C / 98° F	[Progress Bar]			
AROUND LAMP TEMPERATURE	42° C / 107° F	[Progress Bar]			
LAMP1	ON	OFF	RUNTIME	1 H	[Progress Bar]
LAMP2	ON	OFF	RUNTIME	2 H	[Progress Bar]
PROJECTOR TYPE	D5700				
PROJECTOR RUNTIME	2 H				
VERSION	0.27.00				
SELF TEST	No errors				

Callouts from the right side of the image point to the following fields:

- Displays the input switching status.
- Displays temperature of projector's intake air.
- Displays temperature inside the projector.
- Displays temperature around the lamp.
- Displays the lamp1 lit hours.
- Displays the lamp2 lit hours.
- Displays the type of projector.
- Displays used hours of the projector.

Callouts from the bottom of the image point to the following fields:

- Displays self-diagnosis information.
- Displays the firmware version of the projector main unit.

■ Error information page

When [Error](#) [Click here!](#) is displayed on the status information screen, click it to display the error details.

The screenshot shows the 'Status information' tab with the 'SELF TEST' field displaying 'Error (Detail >)'.

The screenshot shows the 'Parasonic projector check system' results. The system is checked, and the following components are listed with their status:

- MAIN CPU BUS [OK]
- FAN [OK]
- OPTICS MODULE TEMPERATURE [OK]
- INPUT AIR TEMPERATURE [OK]
- AROUND LAMP TEMPERATURE [OK]
- LAMP1 REMAIN TIME [OK]
- LAMP2 REMAIN TIME [OK]
- LAMP1 STATUS [OK]
- LAMP2 STATUS [OK]
- SHUTTER [OK]
- AIR FILTER [OK]
- OPTICS MODULE TEMP SENSOR [OK]
- INPUT AIR TEMP SENSOR [OK]
- AROUND LAMP TEMP SENSER [OK]
- BATTERY [OK]
- AIRFLOW SENSOR [OK]
- COLOR WHEEL [OK]
- COVER OPEN [OK]

(Error code 00 02 08 00 00 11 00 00)

OK: Normal operation
FAILED: Occurrence of trouble

Note • Depending on the nature of the error, the projector may be placed in the standby mode for its own protection.

When [FAILED] has appeared for an item

Parameter	Description
MAIN CPU BUS	Trouble has occurred in the microcomputer circuitry. Consult your dealer.
FAN	Trouble has occurred in the fan or its drive circuit. Consult your dealer.
OPTICS MODULE TEMPERATURE	The temperature inside the projector is high. It may be that the projector is being used where the ambient temperature is high such as near a heating appliance.
INPUT AIR TEMPERATURE	The input air temperature is too high. It may be that the projector is being used where the ambient temperature is high such as near a heating appliance.
AROUND LAMP TEMPERATURE	The temperature near the lamp has risen very high. Something may be blocking the exhaust vent.
LAMP REMAIN TIME	The lamp runtime has exceeded the prescribed cumulative time, and it is now time to replace the lamp.
LAMP STATUS	The lamp has failed to light. Wait a short while for the lamp to cool off, and then turn on the power.
SHUTTER	Trouble has occurred in the shutter circuitry. Consult your dealer.
AIR FILTER	Too much dust accumulates on the air filter. Turn off the MAIN POWER switch using the procedure on page 25 and clean the air filter (refer to page 55).
OPTICS MODULE TEMP.SENSOR	Trouble has occurred in the temperature detection sensor inside the projector. Consult your dealer.
INPUT AIR TEMP.SENSOR	Trouble has occurred in the sensor used to detect the input air temperature. Consult your dealer.
AROUND LAMP TEMP. SENSOR	Trouble has occurred in the temperature detection sensor around lamps. Consult your dealer.
BATTERY	The backup battery has been run out. Consult your dealer.
AIRFLOW SENSOR	Trouble has occurred in the air volume sensor. Consult your dealer.
COLOR WHEEL	Trouble has occurred in the color wheel or the color wheel drive circuit. Consult your dealer.
COVER OPEN	The lamp unit cover is not properly fitted. Check the fitting of the lamp unit cover. (page 57)

E-mail set up page

With this projector, if a problem occurs or if the lamp usage time reaches a set value, an E-mail message can be sent to one or more preset E-mail addresses (maximum two addresses). Click [Projector control], then [E-mail set up] to display the E-mail set up page.

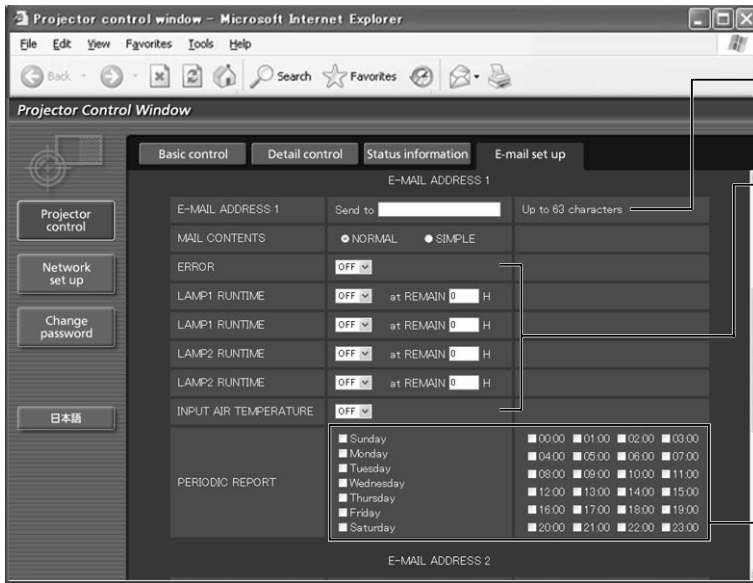

- Select “Enable” to use the E-mail function.
- Enter the IP address or server name of the E-mail server (SMTP). The DNS server must be set if the server name is entered.
- Enter the E-mail address of the projector. (maximum 63 characters)
- The user can enter the location of, for example, the installed projector so that the recipient may easily identify the originator of the E-mail. (maximum 63 characters)
- The user can modify the minimum time interval of temperature warning mail. The default value is 60 minutes. In this case, the user cannot send another mail for 60 minutes after sending previous temperature warning mail even the set warning temperature is reached again.

The user can modify the threshold temperature for sending temperature warning mail. If the temperature rises above the set value, control sends temperature warning mail.

(Continued on the next page)

■ E-mail setup page (Continuing)

Enter the E-mail address of your desired recipient.

Select the conditions for sending E-mail.

ERROR:

an error is detected by self-diagnosis.

LAMP RUNTIME:

remaining lamp service time has reached the value set in the field.

INPUT AIR TEMPERATURE:

intake air temperature has reached the value set in the field.

Periodic warning interval setting (E-mail is sent on the checked days of the week/times)

Enter the E-mail address to which the E-mail is to be sent when two E-mail addresses are going to be used. Do not enter it when the second E-mail address is not going to be used.

Check these boxes when E-mail is to be sent periodically to two E-mail addresses. E-mail will be sent at the times and on the days checked.

Button to update settings

Select the conditions for sending the second E-mail.

ERROR: an error is detected by self-diagnosis.

LAMP RUNTIME: remaining lamp service time has reached the value set in the field.

INPUT AIR TEMPERATURE: intake air temperature has reached the value set in the field.

Note • Only alphanumeric characters, “.”, “_”, “-”, or “@” are available to set an E-mail address.

■ Authentication server set up page

The authentication server is set on this page when POP authentication or SMTP authentication is required for mail transmissions. Click [Network set up], then [Authentication set up] to display the authentication server set up page.

Change the authentication method as desired.

For SMTP authentication, change the authentication method to use, as desired.

Enter the POP server name.
Available input characters: alphanumeric characters (A - Z, a - z, 0 - 9), hyphen (-) period (.)

Enter the user name for the SMTP or POP server.

Enter the password for the SMTP or POP server.

Enter the SMTP server port number.

Enter the POP server port number.

Button to update settings

■ DNS server set up page

Click [Network set up], then [DNS server set up] to display the DNS server set up page.

Primary DNS server address
Available input characters: numbers (0 - 9), period (.) (ex. 192.168.0.253)

Secondary DNS server address
Available input characters: numbers (0 - 9), period (.) (ex. 192.168.0.254)

Button to update settings

■ Ping test page

This page makes it possible to check whether the network is connected to the E-mail server, authentication server, DNS server, etc. Click [Network set up], then [Ping test] to display the Ping test page.

Enter the IP address of the server to be tested.

Button for conducting the test.

```

PING 192.168.0.122 (192.168.0.122): 56 data bytes
64 bytes from 192.168.0.122: icmp_seq=0 ttl=128 time=0.6 ms

■ Adjust clock page

Click [Network set up], then [Adjust clock] to display the Adjust clock page.

Time zone selection

Button to update time zone setting

New date field

Button to update time and date settings

New time field

Note

- If the time becomes incorrect immediately after setting the correct time, then the battery needs to be changed. Contact the dealer where you bought the projector to have the battery changed.

■ Network config page

Click [Network set up], then [Network config] to display the Network config page.

Set this to ON to enable the DHCP client function.

Enter the IP address if DHCP server is not used.

Enter the subnet mask if DHCP server is not used.

Enter the gateway address if DHCP server is not used.

Enter the name of the projector here. Enter the host name here if it is required when the DHCP server is going to be used, for instance.

■ Network status page

Click [Network set up], then [Network status] to display the Network status page.

Network software version display

Set IP address display

Using the PJLink™ protocol

The network functions of the projector are compatible with PJLink™ Class 1. The operations mentioned below can be performed from a personal computer using the PJLink™ protocol.

- Projector settings
- Projector status inquiry

■ Supported commands

The commands for controlling the projector using the PJLink™ protocol are as given in the table below.

Command	Control Description	Remarks
POWR	Power control	Parameter 0 = Standby 1 = Power "ON"
POWR ?	Power status inquiry	Parameter 0 = Standby 1 = Power "ON" 2 = Cooling down 3 = During warm-up
INPT	Input selection	Parameter 11 = RGB1 12 = RGB2 21 = VIDEO 22 = S-VIDEO 31 = DVI-D
INPT ?	Input selection inquiry	
AVMT	Shutter control	Parameter 30 = Shutter mode OFF (Mute reset of video) 31 = Shutter mode ON (Mute video)
AVMT ?	Shutter status inquiry	
ERST ?	Error status inquiry	Parameter 1st byte: Refers to fan error; one of 0 to 2 2nd byte: Refers to lamp error; one of 0 to 2 3rd byte: Refers to temperature error; one of 0 to 2 4th byte: Refers to cover open error; one of 0 to 2 5th byte: Refers to filter warning; one of 0 to 2 6th byte: Refers to some other error; one of 0 to 2 The meaning of 0 to 2 is as given below. 0 = Error not detected 1 = Warning 2 = Error
LAMP ?	Lamp status inquiry	Parameter First number (digits 1 to 5): Lamp1 cumulative time Second number: 0 = Lamp1 OFF; 1 = Lamp1 ON Third number (digits 0 to 5): Lamp2 cumulative time Fourth number: 0 = Lamp2 OFF; 1 = Lamp2 ON
INST ?	Input selection list inquiry	Parameter responds with following values: "11 12 21 22 31"
NAME ?	Projector name inquiry	Responds with the name set in "HOST NAME" of "NETWORK"
INF1 ?	Manufacturer's name inquiry	Responds with "Panasonic"
INF2 ?	Model name inquiry	Responds with "D5700" or "DW5100"
INFO ?	Other information inquiry	Responds with version number and so on
CLSS ?	Class information inquiry	Responds with "1"

■ PJLink™ security authentication

The password used for PJLink™ is the same as the password set for WebBrowser control.

When using these commands without authentication, leave the WebBrowser control password unspecified.

- PJLink™ is a pending trademark in Japan, the United States and other countries and regions. For details on PJLink™ specifications, refer to the Japan Business Machine and Information System Industries Association website. The URL is <http://pjlink.jbmia.or.jp/english/>

Setting the security

The projector's security function enables the password input screen to be displayed or a company's URL address to be set and displayed underneath the projected images.

(When using the projector for the first time)

Press the ▲, ►, ▼, ◀, ▲, ►, ▼ and ◀ buttons in this order, and press the ENTER button.

(When the password has been changed)

Input the new password, and press the ENTER button.

■ PASSWORD

It is possible to display the password input screen each time the power is turned on. If this option is used, no operations except for the POWER button can be performed without inputting the correct password.

ON : Password input is enabled.

OFF : Password input is disabled.

■ PASSWORD CHANGE

The password can be changed. Press the ENTER button.

- ① **Set the password using the ▲, ▼, ◀, ► buttons (up to 8 buttons can be set).**
- ② **Press the ENTER button.**
- ③ **Confirm the password by inputting it again.**
- ④ **Press the ENTER button.**
(This completes the settings.)

- Note**
- Asterisks (*) will appear on the screen in the place of the actual password when the password is input.
 - If the password is input incorrectly, the display returns to "NEW". Input the correct password.

■ DISPLAY SETTING

The text which has been set can be displayed underneath the projected images all the time.

OFF : The text display is disabled.

TEXT : The text display is enabled.

LOGO1 : The picture registered by the user will be projected.

LOGO2 : The Panasonic logo is projected.

■ TEXT CHANGE

The text which is to be displayed when "TEXT" has been selected for the "DISPLAY SETTING" can be changed. Press the ENTER button.

- ① **Select the text using the ▲, ▼, ◀, ► buttons, and press the ENTER button. (Up to 22 alphanumeric characters can be input in succession.)**
 - ② **Select "OK" using the ▲, ▼, ◀, ► buttons, and press the ENTER button.**
- To cancel the change at any time, select CANCEL.

■ CONTROL DEVICE SETUP

It is possible to restrict operation from the remote control and the main unit controls.

CONTROL PANEL :

Operation from the main unit controls can be restricted.

ENABLE : Main unit control operation is enabled

DISABLE : Main unit control operation is disabled

REMOTE CONTROLLER :

Operation from the remote control can be restricted.

ENABLE : Remote control operation is enabled

DISABLE : Remote control operation is disabled

- Note**
- Setting changes will be reflected only when you select "OK" at the confirmation screen displayed after you press the ENTER button at the "ENABLE/DISABLE" menu. When the setting has been reflected, the on-screen menu disappears. To continue and perform other operations, press the MENU button and display the MAIN MENU.
 - When you attempt to operate controls (remote control or main unit) that are set to "DISABLE", the password input screen is displayed. To change the setting, input the security password and change the operation setting. The password input screen disappears when you press the MENU button or if you do not perform any operation for 10 seconds.

Using the serial terminals

The main unit is equipped with SERIAL terminals located in its terminal section on the side, and this terminal is compliant with RS-232C. Also a serial output terminal is provided to enable plural projector control.

Examples of connection

• Single projector

• Plural projectors

Pin assignments and signal names

D-Sub 9-pin (female), external appearance

Pin No.	Signal name	Description
①		NC
②	TXD	Send data
③	RXD	Receive data
④		Connected internally
⑤	GND	Ground
⑥		NC
⑦	CTS	Connected internally
⑧	RTS	
⑨		NC

Serial input terminal

D-Sub 9-pin (male), external appearance

Pin No.	Signal name	Description
①		NC
②	RXD	Receive data
③	TXD	Send data
④		NC
⑤	GND	Ground
⑥		NC
⑦	RTS	Connected internally
⑧	CTS	
⑨		NC

Serial output terminal

Communication conditions (Factory setting)

Signal level	RS-232C compliant
Synchronization method	Start-stop synchronization
Baud rate	9 600 bps
Parity	None
Character length	8 bits
Stop bit	1 bit
X parameter	None
S parameter	None

Basic format

Transmission from the computer begins with STX, then the ID, command, parameter, and ETX are sent in this order. Add parameters according to the details of control.

- Attention**
- No command can be sent or received for 10 to 60 seconds after the lamp starts lighting. Try sending any command after that period has elapsed.
 - When sending several commands, be sure to wait for more than 0.5 seconds after receiving a response from the projector, and then send the next command. When sending commands without parameters, a colon (:) is not necessary.

- Note**
- If an unworkable command is received, the projector will send an "ER401" response to the computer.
 - If an invalid command is received, the projector will send an "ER402" response to the computer.
 - Projector ID supported on the RS-232C interface is ZZ (ALL) and a group of 1 to 64 and 0A to 0Z.
 - If a command is sent with a projector ID specified, the projector will return answer back only in the following cases:
 - if it coincides with the projector ID,
 - ID specification is ALL and VPS-SYSTEM is the master, or
 - ID specification is group and Group is the master.
 - In the hexadecimal format, STX has the character code 02 and ETX the character code 03.

Using the REMOTE 2 terminal

Control commands

When controlling the projector from a computer, the following commands are available:

Command	Function of command	Remarks
PON	Power "ON"	To confirm that the power is ON, use a "Power query" command.
POF	Power "STANDBY"	
QPW	Power query	Parameter 000 = STANDBY 001 = Power "ON"
I I S	Switch input modes	Parameter VID = VIDEO SVD = S-VIDEO RG1 = RGB1 RG2 = RGB2 DVI=DVI-D
QSL	Query for active lamp mode	Parameter 0 = DUAL * "SINGLE" will use the lamp (LAMP 1 or LAMP 2) with shorter operating hours. 1 = SINGLE 2 = LAMP 1 3 = LAMP 2
LPM	Active lamp mode	Parameter 0 = DUAL 1 = SINGLE 2 = Only LAMP 1 is on 3 = Only LAMP 2 is on
OLP	Lamp power setting	Parameter 0 = HIGH, 1 = LOW

Note • If you need a detailed command list, please contact your dealer.

Cable specifications

<Connecting to a PC>

Projector		Computer (DTE specifications)	
1	NC	NC	1
2			2
3			3
4	NC	NC	4
5			5
6	NC	NC	6
7			7
8			8
9	NC	NC	9

Attention • To connect the computer to the SERIAL terminal, prepare an adequate communication cable that fits to your personal computer.

Using the REMOTE2 IN terminal provided on the side of the main unit, it is possible to operate the projector from a control panel etc. furnished in a distant location where infrared remote control signal cannot be received.

Example of a control panel layout

Projector set up in a meeting room

Control panel located in a different room

Pin assignments and control

Be sure to short-circuit Pins ① and ⑨ when controlling.

D-Sub 9-pin (female) external appearance

	Names of terminals	Open (H)	Short (L)
①	GND	—	GND
②	POWER	OFF	ON
③	RGB1	Other	RGB1
④	RGB2	Other	RGB2
⑤	VIDEO	Other	VIDEO
⑥	S-VIDEO	Other	S-VIDEO
⑦	DVI	Other	DVI
⑧	SHUTTER	OFF	ON
⑨	RST / SET	Controlled by remote control	Controlled by external contact

Note • The following buttons on the remote control and the operation area of the projector can no longer be operated when pins ① and ⑨ are shorted: POWER button and SHUTTER button. Neither will it be possible to use the RS-232C commands or network functions corresponding to these functions.

• If you short pin ① and pin ⑨, and also short one of the pins from ③ to ⑦ and pin ①, then the following buttons on the projector operating area and the remote control can no longer be operated: POWER, RGB1, RGB2, DVI-D, VIDEO, S-VIDEO and SHUTTER buttons. Neither will it be possible to use the RS-232C commands or network functions corresponding to these functions.

Indication of lamp monitor

This projector is equipped with 3 indicators to show when a lamp needs replacement or there is an abnormal internal temperature. These lamps flash or light up to indicate a problem. Turn the power off and follow the steps below.

Name of monitor lamp	Lamp indication	Information	Checkpoint	Remedial measure
Temperature monitor TEMP 	Lighting in red (lamp unit ON)	Warm-up status	<ul style="list-style-type: none"> Did you turn on the power when the ambient temperature was low (approx. 0 °C)? 	<ul style="list-style-type: none"> Wait about five minutes in the current status. Install the unit in a location having an ambient temperature from 0 °C to 45 °C.
	Blinking in red (1 time)	High temperature inside. (WARNING)	<ul style="list-style-type: none"> Check if the ventilation port is blocked. Is the room air temperature too high? Is the air filter clogged with dust? 	<ul style="list-style-type: none"> Remove the object that is blocking the ventilation port. Move the projector to a temperature of 0 °C to 45 °C and the humidity of 20 % to 80 % (no condensation). Turn off the MAIN POWER switch using the procedure on page 25 and clean the air filter (refer to page 55).
	Blinking in red (2 times)	The filter is clogged.		
	Blinking in red (3 times)	High temperature inside (Standby condition)	<ul style="list-style-type: none"> Cooling fan has been stopped. 	<ul style="list-style-type: none"> Turn off the main power supply (MAIN POWER) switch in the procedure shown on page 25 and consult the distributor.
Lamp monitor LAMP1 LAMP2  	Lighting in red	Indicates the time for replacing the lamp unit.	<ul style="list-style-type: none"> Did you notice a "REPLACE THE LAMP" message on the screen when turning on the projector power supply? Are lamp units installed correctly? 	<ul style="list-style-type: none"> This lamp monitor lights up when the lamp unit used hours have reached 1 800 hours (when "HIGH" is selected as the "LAMP POWER" setting).
	Blinking in red (3 times)	Error is detected in the lamp or lamp power.	<ul style="list-style-type: none"> Did you turn the power back on immediately after turning it off? Some error has arisen in the lamp circuit. Check for fluctuation (or drop) in the source voltage. 	<ul style="list-style-type: none"> Wait until the lamp has cooled off, and then turn on the power. Turn off the MAIN POWER switch using the procedure on page 25 and consult the dealer.

- Attention**
- To solve any problems that the TEMP and LAMP monitor show, first turn the power off by following the steps on pages 24, 25.
 - If the power indicator blinks in red (3 times), the projector has malfunctioned. Please consult your dealer.
 - If the power indicator flashes red (once), the lamp unit cover is not properly fitted. Check the fitting of the lamp unit cover.

Cleaning and replacement of air filter

If too much dust accumulates on the air filter, [CLEAN THE AIR FILTER]* appears at the lower left of the screen, and the temperature monitor (TEMP) will blink once. If even more dust is allowed to accumulate, the temperature inside the main unit will rise, the temperature monitor (TEMP) will blink twice, and the power is turned off. Clean the air filter section once every 100 hours or so as a guideline depending on the location of projector operation.

* It appears only for 30 seconds within 3 minutes after the power is turned on. It disappears if any of the buttons on the rear side of the main unit or on the remote control is pressed.

■ Procedure of cleaning

① Turn off the main power and remove the power plug from the receptacle.

Turn off the main power supply observing the procedure (Powering off the projector) on page 25 and then remove the power plug.

② Dismantle the air filter.

There are two air filters, one at the left and one at the right.

Use your finger to pull the air filter tab toward you, and remove it from the main unit.

③ Clean the air filter.

Suck off deposited dust with a vacuum cleaner.

- Attention**
- Do not suck in the air filter itself.
 - Do not rinse off the air filter with water. Doing so will impair the filter's ability to provide protection from dust.

④ Set the air filter.

Set the air filter in the reverse order to step ②.

- Attention**
- Fit the air filters into place with the filter material facing the back. (The left and right filters have the same shape.)
 - The air filter must be fitted in place when using the projector. Using the projector without the air filter fitted inside, dirt and dust are sucked into the projector, causing failure.

- Note**
- If cleaning cannot remove the dust completely, then it is a sign to replace the air filter. Consult the dealer. In addition, when the lamp unit is replaced, also replace the air filter.
 - Be absolutely sure to use the air filter specifically designed for use with the projector.

Replacing the lamp unit

WARNING!

When replacing the lamp, allow it to cool for at least one hour before handling it.

- The lamp cover gets very hot, and touching it can cause burns.

Make sure that two lamp units are always installed.

Precautions on lamp unit replacement

Remove the power plug and confirm that the surroundings of the lamp unit have cooled off.

- Be careful when handling a light source lamp. The lamp unit has high internal pressure. If improperly handled, explosion might result.
- A used lamp unit may burst if it is handled violently.
For disposition of used lamps, request an industrial waste disposal contractor.
- If you continue to use a lamp after the replacement time, the lamp may break.
- Phillips screwdriver is necessary when replacing a lamp unit.
Take care not to slip your hand when using a screwdriver.

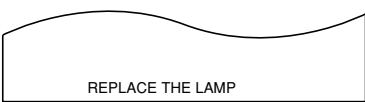

Note

- It is not possible to turn on the power unless two lamp units are installed.
- A lamp unit is an optional part. Contact the dealer.
Replacement lamp unit model No.: ET-LAD57 (single bulb), ET-LAD57W (double bulbs)
- Other lamps than specified above cannot be used. Be sure to use the specified lamp.

■ When to replace the Lamp unit

The lamp units are consumable parts. The lamp brightness decreases gradually as the cumulative operating time increases, so periodic replacement is necessary. The replacement guideline is 2 000 hours*¹, although the lamp may become dead (will not light) before 2 000 hours*¹ is reached depending on the characteristics of individual lamps and other factors such as the operating conditions and the installation environment. Therefore, it is recommended for the user to keep a spare lamp unit.

The risk of the lamp bursting increases after 2 000 hours*¹ of operation, so the lamp unit turns off automatically.

	On-screen indication	Lamp monitor
		
After 1 800 hours*²	The indication appears for 30 seconds or until any control button is pressed.	The lamp monitor lights up red even in standby mode.
After 2 000 hours*¹	The indication will not disappear unless a control button is pressed.	

*¹ This is the operating time if the lamp has only been used at the LAMP POWER “HIGH” setting. If the lamp has only been used at the LAMP POWER “LOW” setting, the operating time is 3 000 hours. When the lamp has been switched from LAMP POWER “HIGH” to “LOW”, the cumulative operating time from the conversion formula below will be 2 000 hours.

Lamp operating time = LAMP POWER “HIGH” operating time + (LAMP POWER “LOW” operating time x 2 ÷ 3).

*² This is the operating time if the lamp has only been used at the LAMP POWER “HIGH” setting. If the lamp has only been used at the LAMP POWER “LOW” setting, the operating time is 2 700 hours. When the lamp has been switched from LAMP POWER “HIGH” to “LOW”, the cumulative operating time from the conversion formula below will be 1 800 hours.

Lamp operating time = LAMP POWER “HIGH” operating time + (LAMP POWER “LOW” operating time x 2 ÷ 3).

■ Lamp unit replacement steps

- ① Turn the power off by following the steps on page 25, remove the power plug and confirm that the surroundings of the lamp unit have cooled off.

Check that the fan has stopped running.

Have a Phillips screwdriver ready ahead of time.

- ② Remove the screw securing the lamp unit cover, and then slide the lamp unit cover a little toward the left, and remove it.

- ③ Remove the two screws securing the fan unit.

Note

• The lamp units are constructed in such a way that the screws in steps ② and ③ will not fall through completely.

- ④ Open the fan unit as shown in the figure.

- ⑤ Remove the screws securing the lamp units (two for each unit), take hold of the handles, and remove the lamp units.

- ⑥ Install the new lamp unit.

- ⑦ Use a Phillips screwdriver to securely tighten the 2 lamp unit fixing screws (two for each unit).

- ⑧ Secure the two screws for securing the fan unit tightly.

- ⑨ Slide the cover a little toward the right, and secure it using the screw for securing the lamp unit cover tightly.

Attention

• Firmly install the lamp unit and lamp unit cover. If not installed firmly, a protection circuit will function and the power will not be turned on.

Caution

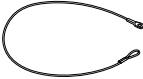

The lamp unit will be hot after it has been used.

You might get burned if you touch it while it is still hot.

Ceiling Mount Bracket Safeguards

The followings are included with the other accessories.

Wire cable (x 1) [TKLA3201]	Wire fastening M6 screw (x 1) [XYN6+F10FJ]
	

The projector and the ceiling mount bracket are designed sufficiently safety though, make sure the safety cable provided with the projector is installed and attached to the bottom of the projector when mounting in the ceiling for safety and security.

Installation work of the ceiling mount bracket should only be carried by a qualified technician according to the following procedure.

- Even if it is guarantee period, the manufacturer is not responsible for any hazard or damage caused by using a ceiling mount bracket which is not purchased from an authorized distributors, or environmental conditions.
- Make sure to use a torque driver and do not use an electrical screwdriver or an impact screwdriver.
- An unused ceiling mount bracket should be removed promptly by qualified technician.

<Installation procedure>

- ① **Install the ceiling mount bracket according to the Installation Instructions.**
- ② **Attach anchor nuts or curl plugs (M8 or 5/16") to a strong ceiling surface in positions (left figure) so that there is no slack in the wire cable provided with the projector.**
- ③ **Pass the loop of wire rope through anchoring area and tighten the hex head bolts.**
- ④ **Attach the metal fittings at the ends of the cable to the locking holes in the projector main unit using the provided wire fastening M6 screws, and tighten the screws firmly to secure the projector.**

* If for any reason the enclosed screw become lost or misplaced, please use the following.

Screw diameter: M6, Length:10 mm (the effective thread depth on the receiving side is 10 mm)

* Likewise if the screws for attaching the custom ceiling mount bracket go missing, please use the following.

Screw diameter: M6, Length:10 mm (the effective thread depth on the receiving side is 10 mm)
Torque Loading: 4±0.5 Nm (for 6 mm screw)

Before asking for service --- check the following points.

Symptoms	Checks
Power does not turn on	<ul style="list-style-type: none"> • Is the power cord plug correctly plugged in? • Is the MAIN POWER turned on? • Is electricity running to the power outlet? • Is the temperature monitor (TEMP) indicator on the front of the unit flashing or turned on? (See page 54) • Is the lamp monitor (LAMP) indicator on the front of the unit flashing or turned on? (See page 54) • Is the lamp unit door installed correctly? • A wrong ID is set. (See pages 15 and 38)
No image	<ul style="list-style-type: none"> • Is the lens cap still on the lens? • Is the image input correctly connected? • Is the input mode set correctly? (See page 24) • Is the black level adjustment set at the minimum level? (See page 30) • Is the equipment connected to the projector operating correctly? • Is the shutter function turned on? (See page 27)
Image is blurred	<ul style="list-style-type: none"> • Is the lens focused properly? (See page 26) • Is the projection distance correct? (See pages 17 to 20) • Is the lens dirty? • Is the projector positioned directly in front of the screen? (See page 16)
Light color/ bad color tone	<ul style="list-style-type: none"> • Is the color density and color tone setting correct? (See page 30) • Is the equipment connected to the projector correctly adjusted?
Remote control does not operate	<ul style="list-style-type: none"> • Are the batteries exhausted? • Are the battery polarities set correctly? (See page 14) • Are there any obstacles between the remote control and the remote control sensor? (See page 14) • Are you trying to operate the remote control beyond its operable range? (See page 14) • Are you controlling from external equipment using the REMOTE2 IN terminal? (See page 53) • Is there any external light interfering with remote control operation? • A wrong ID is set. (See pages 15 and 38) • Is the on-screen display function at "OFF"? (See page 9)
Abnormal image	<ul style="list-style-type: none"> • Is the input mode properly set? (See page 24) • Is the correct signal system (SYSTEM SELECTOR) selected? (See page 31) • Are there any malfunctions on the source side, such as bad video tapes? • Are you inputting a signal that is not compatible with this projector? (See page 62)
Does not display images from PCs	<ul style="list-style-type: none"> • Is the cable too long? • Is the video output signal setting of the computer correctly set? (Read the operating instructions of the your PC.)

Projection lamp	2 bulbs x 300 W UHM lamp			
Optical output	6 000 lm* ¹		5 500 lm* ¹	
Applicable scanning frequency For Video signal (S-Video included) For RGB signal For DVI-D signal For YPBPR signal	<p>Horizontally 15.73 kHz/15.63 kHz, vertically 59.94 Hz/50 Hz Horizontally 15 kHz – 91 kHz, vertically 50 Hz – 85 Hz, Panasonic Intelligent Auto Scanning (PIAS) system Dot clock frequency less than 150 MHz Compliant with HDCP*² 480p, 576p, 1080/60i, 1080/50i, 720/60p, 720/50p, 1080/60p, 1080/50p VGA60, SVGA60, XGA50, XGA60, XGA70, XGA75, XGA85, XGA89, WXGA768/50, WXGA768/60, SXGA60</p> <p>[480i], horizontally 15.73 kHz, vertically 59.94 Hz [480p], horizontally 31.5 kHz, vertically 59.94 Hz [576i], horizontally 15.63 kHz, vertically 50 Hz [576p], horizontally 31.25 kHz, vertically 50 Hz [720/60p], horizontally 45 kHz, vertically 60 Hz [720/50p], horizontally 37.5 kHz, vertically 50 Hz [1080/60p], horizontally 67.5 kHz, vertically 60 Hz [1080/50p], horizontally 56.25 kHz, vertically 50 Hz [1035/60i], horizontally 33.75 kHz, vertically 60 Hz [1080/60i], horizontally 33.75 kHz, vertically 60 Hz [1080/50i], horizontally 28.13 kHz, vertically 50 Hz • HD/SYNC, VD terminals are not compliant with 3 value composite SYNC.</p>			
Color system	7 standards (NTSC/NTSC4.43/PAL/PAL-N/PAL-M/SECAM/PAL60)			
Screen size	50 inch – 600 inch* ³			
Screen aspect ratio	4:3		15:9	
Projection scheme	Menu-selectable from front/rear/ceiling mount, and floor standing			
Contrast ratio	2 000:1 (when "HIGH" is selected as the "CONTRAST MODE" setting)			
Interface ports RGB1 input terminal	<p>1 set, BNC x 5 [For YPBPR input] Y: 1.0 V[p-p] synchronization signal included, PbPR: 0.7 V[p-p] 75 Ω [For RGB input] 0.7 V[p-p] 75 Ω For G-SYNC: 1.0 V[p-p] 75 Ω HD/SYNC: TTL, high-impedance, positive/negative polarity automatically adjusted VD: TTL, high-impedance, positive/negative polarity automatically adjusted • HD/SYNC, VD terminals are not compliant with 3 value composite SYNC.</p>			

*¹ These values are for the lens provided with the PT-D5700U/PT-DW5100U.

Note that these values change according to the lens used.

*² HDCP (High-bandwidth Digital Content Protection)

HDCP is a digital video signal encryption system developed with the aim of protecting digital content.

*³ When using ET-DLE050 lens, the maximum screen size is 200 inch.

Model No.	PT-D5700U	PT-D5700UL	PT-DW5100U	PT-DW5100UL
Interface ports				
RGB2 input terminal	1 set of high-density, D-Sub 15-pin (female) [For YP _B PR input] Y: 1.0 V [p-p] synchronization signal included, P _B PR: 0.7 V [p-p] 75 Ω [For RGB input] 0.7 V [p-p] 75 Ω For G-SYNC: 1.0 V [p-p] 75 Ω HD/SYNC: TTL, high-impedance, positive/negative polarity automatically adjusted VD: TTL, high-impedance, positive/negative polarity automatically adjusted			
Video input terminal	• HD/SYNC, VD terminals are not compliant with 3 value composite SYNC. 1 set BNC 1.0 V [p-p] 75 Ω			
S-Video input terminal	1 set Mini DIN 4-pin Y 1.0 V [p-p] C 0.286 V [p-p] 75 Ω Compliant with S1 signals			
Serial input/output terminal	1 set each for D-Sub 9-pin (male/female), RS-232C compliant Used for personal computer control			
Remote1 input/output terminal	1 set each for M3 stereo mini jack Wired remote control, used for link control			
Remote2 input terminal	1 set D-Sub 9-pin (female) Used for external control			
DVI-D input terminal	1 set DVI-D 24-pin Single link, compatible with HDCP			
LAN terminal	1 set RJ-45 Compliant with PLink™			
Length of power cord	3.0 m (9.8')			
Cabinet	Molded resin			
Outside dimensions	Width: 530 mm (20.8"); Height : 167 mm (6.6"); Depth: 425 mm (16.7")			
Mass	13.9 kg (30.6 lb)	13.1 kg (28.9 lb)	13.9 kg (30.6 lb)	13.1 kg (28.9 lb)
Working environment condition	Ambient temperature* ⁴ : 0 °C to 45 °C Ambient humidity : 20 % to 80 % (no condensation)			
Remote control				
Power source	3 V DC (two AA dry cells)			
Operation range	approx. 30 m (98'5") (in front of beam receiver)			
Mass	134 g (0.31 lb) (including dry cells)			
Outside dimensions	Width: 51 mm (2"), Thickness: 23 mm (0.9"), Depth: 176 mm (6.9")			
Option				
Hanging attachment (For high ceiling)	ET-PKD56H			
Hanging attachment (For low ceiling)	ET-PKD55S			
Projection lens	PT-D5700U/PT-D5700UL ET-DLE100, ET-DLE200, ET-DLE300, ET-DLE400, ET-DLE050 PT-DW5100U/PT-DW5100UL ET-DLE100, ET-DLE200, ET-DLE310, ET-DLE410, ET-DLE050			
Replacement lamp unit	ET-LAD57 (single bulb), ET-LAD57W (double bulbs)			

• The outside dimensions do not include the lens and other protruding parts. See page 63 for further details.

*⁴ When using the projector at high altitudes (1 400 to 2 700 m : 4 593.2' to 8 858.3'), the upper limit for the ambient temperature drops by 5 °C.

Compatible Signal List

Display mode	Resolution (as a number of dots)*1	Scanning frequency		Dot clock frequency (MHz)	Image quality*2	Format
		Horizontal (kHz)	Vertical (Hz)			
NTSC/NTSC4.43/ PAL-M/PAL60	720 x 480i	15.7	59.9		A	VIDEO/S-VIDEO
PAL/PAL-N/SECAM	720 x 576i	15.6	50.0		A	VIDEO/S-VIDEO
480i	720 x 480i	15.7	59.9	13.5	A	YPbPr/RGB
576i	720 x 576i	15.6	50.0	13.5	A	YPbPr/RGB
480p	720 x 483	31.5	59.9	27.0	A	YPbPr/RGB/DVI
576p	720 x 576	31.3	50.0	27.0	A	YPbPr/RGB/DVI
1080/60p	1 920 x 1 080	67.5	60.0	148.5	A	YPbPr/RGB/DVI
1080/50p	1 920 x 1 080	56.3	50.0	148.5	A	YPbPr/RGB/DVI
1080/60i	1 920 x 1 080i	33.8	60.0	74.3	A	YPbPr/RGB/DVI
1080/50i	1 920 x 1 080i	28.1	50.0	74.3	A	YPbPr/RGB/DVI
720/60p	1 280 x 720	45.0	60.0	74.3	A	YPbPr/RGB/DVI
720/50p	1 280 x 720	37.5	50.0	74.3	A	YPbPr/RGB/DVI
VGA400	640 x 400	31.5	70.1	25.2	A	RGB
	640 x 400	37.9	85.1	31.5	A	RGB
VGA480	^{*3} 640 x 480	31.5	59.9	25.2	A	RGB/DVI
	640 x 480	35.0	66.7	30.2	A	RGB
	640 x 480	37.9	72.8	31.5	A	RGB
	640 x 480	37.5	75.0	31.5	A	RGB

	800 x 600	53.7	85.1	56.3	A	RGB
MAC16	832 x 624	49.7	74.6	57.3	A	RGB
XGA	^{*3} 1 024 x 768	39.6	50.0	51.9	AA	RGB/DVI
	^{*3} 1 024 x 768	48.4	60.0	65.0	AA	RGB/DVI
	1 024 x 768	56.5	70.1	75.0	AA	RGB/DVI
	1 024 x 768	60.0	75.0	78.8	AA	RGB/DVI
	1 024 x 768	68.7	85.0	94.5	AA	RGB/DVI
	1 024 x 768i	35.5	87.0	44.9	AA	RGB
MXGA	1 152 x 864	64.0	71.2	94.2	A	RGB
	1 152 x 864	67.5	74.9	108.0	A	RGB
	1 152 x 864	76.7	85.0	121.5	A	RGB
WXGA	^{*3} 1 280 x 800	41.3	50.0	68.6	A	RGB
	^{*3} 1 280 x 800	49.7	59.8	83.5	A	RGB
	^{*3} 1 280 x 768	39.6	50.0	65.2	AA*4	RGB/DVI
	^{*3} 1 280 x 768	47.7	60.0	80.1	AA*4	RGB/DVI
MAC21	1 152 x 870	68.7	75.1	100.0	A	RGB
MSXGA	1 280 x 960	60.0	60.0	108.0	A	RGB
SXGA	^{*3} 1 280 x 1 024	64.0	60.0	108.0	A	RGB/DVI
	1 280 x 1 024	80.0	75.0	135.0	A	RGB
	1 280 x 1 024	91.1	85.0	157.5	B	RGB
	^{*3} 1 400 x 1 050	64.0	60.0	108.0	A	RGB/DVI
UXGA	^{*3} 1 600 x 1 200	75.0	60.0	162.0	B	RGB

*1 Character “i” that follows the number of displayed dots stands for interlace signal.

*2 The symbols used to denote the image quality have the following significance:

AA = the images are projected at the highest quality (With XGA for the PT-D5700U/PT-D5700UL; with XGA/WXGA 1 280 x 768 for the PT-DW5100U/PT-DW5100UL); A = the images are converted by the image processing circuit and projected; B = the amount of data is scaled down and simplified images are projected.

*3 These signals support the frame lock function.

*4 The PT-D5700U and PT-D5700UL provide “A” image quality.

Note

• The number of display dots are 1 024 x 768 for PT-D5700U/PT-D5700UL, and 1 280 x 768 for PT-DW5100U/PT-DW5100UL. If signals with a number of display dots differing from the data listed above are supplied, they will be converted into signals with 1 024 x 768 dots and displayed for PT-D5700U/PT-D5700UL, and 1 280 x 768 for PT-DW5100U/PT-DW5100UL.

Dimensions

unit : mm, () : inch

Installation dimensions diagram

(Figure 1 : Dimensions applying when one unit is used)

(Figure 2 : Dimensions applying when two units are used)

- Attention**
- Leave a clearance of at least 50 cm (19.7") so that the ventilation opening on the rear panel will not be blocked.
 - Be careful not to retain exhausted air on the back side of the main unit. Also take steps to ensure that the hot air blown out from the air exhaust outlet will not be sucked into the air intake.
 - Install with clearances of at least 30 cm (11.8") provided for the side panels to enable the air filter to be removed and re-installed.
 - When operating the projector in an enclosure, ensure that the temperature of the surrounding air within the enclosure remains within the range 0 °C to 40 °C while the projector is running. Also ensure that the air intake and exhaust vents are unobstructed. Even when the surrounding air temperature is maintained below 40 °C, operation of the protection circuit could cause a shutdown due to hot exhaust air being trapped inside the projector. When designing the enclosure, please give due consideration to the thermal environment surrounding the projector (Figure 2).

Note:

Purchase of this equipment includes the rights to use this software (the built-in microcomputer and information recorded on ROMs) but does not grant copyrights. Do not reverse engineer, change or modify the software. The guarantee will not be valid for any malfunctions caused by such actions.

NOTES IMPORTANTES

CONCERNANT LA SÉCURITÉ

AVERTISSEMENT: POUR RÉDUIRE LES RISQUES DE FEU OU DE CHOC ÉLECTRIQUE, NE PAS EXPOSER CE PRODUIT À L'EAU OU À L'HUMIDITÉ

Le symbole de la flèche en forme d'éclair, dans un triangle, avertit l'utilisateur de la présence de "tensions dangereuses" à l'intérieur du produit qui peuvent être de force suffisante pour constituer un risque de choc électrique aux personnes.

Le point d'exclamation dans un triangle avertit l'utilisateur de la présence d'instructions importantes concernant l'utilisation et l'entretien (réparation) dans la littérature accompagnant le produit.

ATTENTION: Cet appareil est équipé d'une fiche de courant à trois broches avec mise à la terre. Ne pas retirer la broche de mise à la masse de la fiche. Cette fiche ne pourra être utilisée que dans une prise avec mise à la terre. Ceci est une précaution sécuritaire. S'il est impossible d'insérer la fiche dans la prise, s'adresser à un électricien. Ne pas annuler la protection de la fiche à mise à la terre.

AVERTISSEMENT:

Ne peut être utilisé dans une salle d'ordinateurs telle que définie dans la norme ANSI/NFPA 75 Standard for Protection of Electronic Computer/Data Processing Equipment.

Précautions concernant la sécurité

AVERTISSEMENT

Si l'on remarque une émission de fumée, d'odeurs suspectes ou de bruits provenant du projecteur, débrancher la fiche du cordon d'alimentation de la prise de courant.

- Ne pas continuer d'utiliser le projecteur dans ces cas, autrement cela peut entraîner un incendie ou des chocs électriques.
- Après s'être assuré que de la fumée ne se dégage plus, s'adresser à un centre technique agréé et demander que les réparations nécessaires soient faites.
- Le fait de réparer le projecteur soi-même est très dangereux, et ne doit jamais être fait.

Demander à un technicien qualifié d'installer le projecteur par exemple s'il est installé au plafond.

- Si l'installation n'est pas faite correctement, cela peut entraîner des blessures ou des chocs électriques.
- Utiliser le support de montage au plafond spécifié pour ce modèle.
- Utiliser le câble métallique de sûreté fourni et prendre les mesures nécessaires pour éviter que le projecteur ne tombe.

Ne pas surcharger la prise de courant.

- Si l'alimentation est surchargée (par exemple, par l'utilisation de trop d'adaptateurs), cela risque de faire surchauffer le projecteur et peut entraîner un incendie.

Ne pas regarder directement dans l'objectif pendant que le projecteur fonctionne.

- Une lumière intense est émise par l'objectif du projecteur. Si l'on regarde directement dans cette lumière, elle risque de causer des blessures et de graves lésions aux yeux.
- Veiller particulièrement à ce que les enfants ne regardent pas dans l'objectif. En outre, éteindre le projecteur si on le laisse sans surveillance.

Ne jamais tenter de modifier ou de démonter le projecteur.

- Des hautes tensions qui peuvent causer de graves blessures sont présentes à l'intérieur du projecteur.
- Pour toute inspection, réglage ou réparation, s'adresser à un centre technique agréé.

Ne pas installer ce projecteur dans un endroit non assez résistant pour supporter son poids, ni sur une surface instable.

- Si le projecteur est installé dans un endroit non assez résistant ou sur une surface inclinée ou instable, il risque de tomber ou de basculer, et de causer une grave blessure ou des dommages.

Si de l'eau ou des objets étrangers entrent dans le projecteur, si le projecteur tombe, ou si le boîtier est endommagé, débrancher immédiatement la fiche du cordon d'alimentation de la prise de courant.

- Si l'on continue d'utiliser le projecteur dans cette condition, cela peut entraîner un incendie ou des chocs électriques.
- S'adresser à un centre technique agréé pour que les réparations nécessaires puissent être faites.

Ne pas placer des récipients de liquide sur le projecteur.

Ne pas placer le projecteur dans l'eau ou ne pas le laisser se mouiller.

- Si de l'eau se renverse sur le projecteur ou pénètre dans celui-ci, il y aura risque d'incendie ou d'électrocution.
- Si de l'eau entre à l'intérieur du projecteur, entrer en contact avec un centre technique agréé.

Ne pas mettre d'objets étrangers dans le projecteur.

- Ne pas insérer d'objets métalliques ou inflammables dans les orifices de ventilation ou les faire tomber sur le projecteur, car cela peut causer un incendie ou des chocs électriques.

Utiliser exclusivement le cordon d'alimentation fourni avec le projecteur.

Ne pas utiliser avec d'autres appareils le cordon d'alimentation fourni avec le projecteur.

- Cela peut entraîner des chocs électriques.

Brancher la fiche du cordon d'alimentation fermement dans la prise de courant.

- Si la fiche n'est pas complètement insérée, cela peut entraîner des chocs électriques ou la faire surchauffer.
- Si la fiche est endommagée ou la plaque de la prise desserrée, celles-ci ne devraient pas être utilisées.

Faire attention à ne pas endommager le cordon d'alimentation.

- Ne pas endommager le cordon d'alimentation, ne pas le modifier, ne pas le placer sous des objets lourds, ne pas le chauffer, ne pas le placer près d'objets chauffants, ne pas le tordre, ne pas le plier ou le tirer excessivement et ne pas le rouler en boule.
- Si le cordon d'alimentation est endommagé, cela peut entraîner un incendie et des chocs électriques.
- Si le cordon d'alimentation est endommagé, le faire réparer par un centre technique agréé.

Nettoyer la fiche du cordon d'alimentation régulièrement afin d'éviter toute accumulation de poussière.

- Si de la poussière s'accumule sur la fiche du cordon d'alimentation, l'humidité peut endommager l'isolant et entraîner un incendie. Débrancher la fiche du cordon d'alimentation de la prise de courant et l'essuyer avec un tissu sec.
- Si le projecteur n'est pas utilisé pendant une période prolongée, débrancher la fiche du cordon d'alimentation de la prise de courant.

Ne pas manipuler le cordon d'alimentation avec les mains mouillées.

- Cela peut entraîner des chocs électriques.

Ne pas installer le projecteur dans des endroits humides ou poussiéreux ou dans des endroits où le projecteur peut entrer en contact avec des fumées grasses ou de la vapeur.

- L'utilisation du projecteur dans de telles conditions peut causer un incendie, des chocs électriques ou une détérioration du boîtier en plastique. Une détérioration du plastique risquerait en effet d'entraîner une chute du projecteur en cas d'installation au plafond.

Ne pas placer le projecteur sur des matériaux comme du tapis ou du tissu éponge.

- Cela peut provoquer une surchauffe du projecteur, pouvant entraîner des brûlures, un incendie ou endommager le projecteur.

Pendant un orage, ne pas toucher le projecteur ou le câble.

- Il y a risque d'électrocution.

Ne pas placer les mains ou autres objets près de l'orifice de sortie d'air.

- De l'air chaud sort par l'orifice de sortie d'air. Ne pas placer les mains, le visage ou d'autres objets qui ne peuvent résister à la chaleur près de cette sortie d'air [laisser un espace d'au moins 50 cm (19.7")], sinon des brûlures ou des dommages risqueraient de s'ensuivre.

Ne pas utiliser ou manipuler les piles de manière inadéquate.

- Si ces précautions sont ignorées, les piles risquent de fuir, de surchauffer, d'éclater ou de s'enflammer.
 - Ne pas démonter les piles sèches.
 - Ne pas chauffer ou démonter les piles, ni les placer près d'un feu ou d'un liquide tel que l'eau.
 - Ne pas connecter les bornes + et - à des fils ou autres objets métalliques.
 - Ne pas ranger les piles avec des objets métalliques tels que colliers ou épingles à cheveux.
 - S'assurer d'insérer les piles avec les polarités (+ et -) dans le bon sens.
 - Ne pas utiliser ensemble des piles usées et des piles neuves, ni des piles de types différents.
 - Ne pas utiliser les piles dont le revêtement extérieur se détache ou a été retiré.
 - Ne pas utiliser de piles rechargeables à la place des piles sèches ordinaires.
 - Les piles possèdent un revêtement extérieur de protection. Ne pas retirer ce revêtement car cela comporte un risque de court-circuit.

En cas de fuite des piles, ne pas les toucher à mains nues et prendre les mesures nécessaires suivantes.

- Il y a risque de perte de la vue si l'électrolyte pénètre dans les yeux. Le cas échéant, ne pas frotter les yeux. Rincer à l'eau claire et consulter immédiatement un médecin.
- Le contact de l'électrolyte avec la peau ou les vêtements peut causer des inflammations de la peau ou des blessures. Rincer à l'eau claire et consulter immédiatement un médecin.

Retirer en même temps les piles de la télécommande lorsqu'elles sont épuisées.

- Ne pas laisser de piles épuisées dans l'appareil, car elles risqueraient de fuir, de surchauffer ou d'éclater.

Avant de remplacer la lampe, veiller à débrancher la fiche du cordon d'alimentation de la prise de courant.

- Il y a risque d'électrocution ou d'explosion.

Lors du remplacement de la lampe, la laisser refroidir pendant au moins une heure avant de la manipuler.

- Le couvercle de la lampe devient très chaud, et on risque de se brûler si on le touche.

Ne jamais démonter la lampe.

- Toute rupture de la lampe risquerait en effet de causer de graves blessures.

Attention

Pour débrancher le cordon d'alimentation, tenir la fiche et non pas le cordon.

- Si le cordon d'alimentation est tiré, le cordon sera endommagé et cela peut causer un incendie, des courts-circuits ou des chocs électriques sérieux.

Débrancher toujours tous les câbles avant de déplacer le projecteur.

- Le fait de déplacer le projecteur avec des câbles branchés peut endommager les câbles, ce qui pourrait causer un incendie ou des chocs électriques.

Ne pas placer un projecteur ou autre objet lourd sur l'appareil.

Ne pas peser de tout son poids sur ce projecteur.

- Cela peut déséquilibrer le projecteur et le faire tomber, ce qui peut entraîner des dommages ou des blessures.
- Cela risquerait d'endommager ou de déformer le projecteur.

Ne pas empêcher la chaleur de s'échapper.

- Cela risque de faire surchauffer le projecteur, et causer un incendie ou endommager le projecteur.
- Ne pas installer le projecteur dans des endroits étroits, mal ventilés tels que des placards ou des étagères.
- Ne pas placer le projecteur sur des tissus ou du papier, ces matériaux peuvent être aspirés dans l'orifice d'entrée d'air.

Si la lampe s'est cassée, ventiler immédiatement la pièce. Ne pas toucher ni approcher le visage des morceaux cassés.

- Le non respect de cette consigne peut entraîner l'absorption du gaz par l'utilisateur. Ce gaz se dégage lorsque la lampe est cassée et il contient presque autant de mercure qu'une lampe fluorescente, de plus les morceaux cassés peuvent provoquer des blessures.
- Si vous pensez avoir inhalé du gaz ou que du gaz a pénétré dans votre bouche ou dans vos yeux, contactez un médecin immédiatement.
- S'adresser au revendeur pour le remplacement de la lampe et l'inspection de l'intérieur du projecteur.

Si l'on n'utilise pas le projecteur pendant une période prolongée, débrancher la fiche du cordon d'alimentation de la prise de courant.

- Si de la poussière s'accumule sur la fiche du cordon d'alimentation, l'humidité ainsi créée risquera d'endommager l'isolation, ce qui peut provoquer un incendie.

Débrancher la fiche du cordon d'alimentation de la prise de courant comme mesure de sécurité avant d'effectuer tout nettoyage.

- Sinon cela peut causer des chocs électriques.

Prendre garde de se coincer les doigts entre l'objectif et le protecteur lorsque l'on change d'objectif.

- Prendre garde de se coincer les doigts entre l'objectif et le protecteur lorsque l'on change d'objectif, car cela comporte un risque de blessure.

Demander à un centre technique agréé de nettoyer l'intérieur du projecteur au moins une fois par an.

- S'il n'est pas nettoyé et que de la poussière s'accumule à l'intérieur du projecteur, cela peut causer un incendie ou des problèmes de fonctionnement.
- Il est recommandé de nettoyer l'intérieur du projecteur avant l'arrivée de la saison humide. Demander au centre technique agréé le plus proche de nettoyer le projecteur lorsque cela est requis. Se renseigner auprès du centre technique agréé pour le coût du nettoyage.

Si le projecteur doit rester inutilisé pour une période prolongée, retirer les piles de la télécommande.

- Autrement les piles risqueraient de fuir, de surchauffer, de prendre en feu ou d'éclater, ce qui peut causer un incendie ou endommager les zones adjacentes.

Ne pas utiliser la lampe usée.

- Le bloc lampe risquerait de se casser.

Ne pas placer le projecteur dans des endroits extrêmement chauds.

- Cela peut causer la détérioration du boîtier ou des composants internes, ou causer un incendie.
- Prêter une attention particulière dans les endroits directement exposés aux rayons du soleil ou près des fours.

Précautions pour la manipulation

■ Précautions pour le transport

S'assurer absolument que le capuchon d'objectif est en place pour transporter le projecteur ou le déplacer. Le projecteur et la lentille de projection sont fabriqués avec précision et, en tant que tels, sont sensibles aux vibrations et aux chocs. Pour transporter le projecteur et la lentille ou les déplacer, les mettre dans les cartons dans lesquels ils étaient au moment de leur achat, et prendre des précautions afin de les protéger de vibrations et de chocs.

■ Précautions pour l'installation

Observez les précautions suivantes à l'installation du produit.

● Evitez d'installer le produit à un emplacement exposé à des vibrations ou impacts.

Si le projecteur est installé à un emplacement où des vibrations sont transmises d'une source à puissance motrice et autre, ou monté sur une voiture ou un bateau, des vibrations ou impacts peuvent être transmis au produit qui peuvent endommager les pièces internes, causant une défaillance. Installez le produit à un emplacement exempt de vibrations et d'impacts.

● Ne déplacez pas le projecteur pendant qu'il fonctionne, et évitez de l'exposer à des vibrations ou chocs.

La durée de service de ses moteurs internes risquerait d'être réduite.

● N'installez pas le projecteur près de lignes haute tension ou de sources d'énergie.

Le produit pourrait être exposé à des interférences s'il est installé à proximité de lignes haute tension ou de sources d'énergie.

● Ne placez pas le projecteur sur une feuille en vinyle ou un tapis.

Si la feuille de vinyle est aspirée et bloque de part d'admission du filtre à air, la température peut augmenter à l'intérieur du projecteur, ce qui déclenchera le circuit de protection et mettra le projecteur hors tension.

● Consultez un technicien spécialisé pour l'installation du projet au plafond.

Si l'appareil doit être installé suspendu au plafond, se procurer une fixation de suspension en option (pour plafond élevé : modèle N° ET-PKD56H ; pour plafond bas : modèle N° ET-PKD55S). Contacter un technicien spécialisé ou un centre de service après-vente agréé pour l'installation.

● Installez le projecteur de sorte qu'il repose uniquement sur son panneau inférieur et par aucune de ses autres pièces ou surfaces.

● N'installez pas le projecteur à plus de 2 700 m (8 858.3') au-dessus du niveau de la mer. A l'utilisation au-dessus de 1 400 m (4 593.2') au-dessus du niveau de la mer, réglez "ALTITUDE", expliqué à la page 38, à "HAUTE".

En cas contraire, la durée de vie l'appareil risque d'être raccourcie. Pour l'utilisation à plus de 2 700 m au-dessus du niveau de la mer, informez-vous auprès du revendeur.

● Mise au point de l'objectif

Ne pas régler la mise au point de l'objectif pendant la période initiale (environ 30 minutes) qui suit la mise sous tension du projecteur. Cet objectif de projecteur à grande netteté est affecté par la chaleur des sources de lumière, et ceci rend la mise au point instable pendant la période qui suit immédiatement la mise sous tension du projecteur. Laisser le projecteur se réchauffer pendant au moins 30 minutes avant de régler la mise au point de l'objectif. Autrement la chaleur risque de faire dériver la mise au point.

■ Mise au rebut

Contactez le revendeur ou un revendeur spécialisé pour la mise au rebut du produit.

■ Précautions pour l'utilisation

● Pour visualiser des images nettes:

- Le public ne peut pas jouir d'un fort contraste et d'image nettes si la lumière extérieure ou l'éclairage interfère avec la surface de l'écran. Tirez les rideaux des fenêtres ou les stores, éteignez l'éclairage près de l'écran ou prenez d'autres mesures adaptées.
- Suivant l'emplacement d'utilisation du projecteur, il arrive dans de rares cas que l'air chaud émis par les sorties d'air ou par le climatiseur provoque un effet de chatouillement sur l'écran. Pour cette raison, évitez de couvrir les sorties d'air et tenir compte de l'orientation du flux d'air émis par le climatiseur.

● Ne touchez pas la surface de l'objectif de projection les mains nues.

Si des empreintes de doigts sont laissées sur la surface de l'objectif de projection, elles seront agrandies et projetées sur l'écran. Maintenez vos mains loin de l'objectif. Couvrez l'objectif avec le bouchon d'objectif fourni quand le projecteur n'est pas utilisé.

● Lampe

Une lampe au mercure à pression interne élevée est utilisée comme source lumineuse de ce produit. Cette lampe a les caractéristiques suivantes :

- Elle peut éclater sous l'effet d'un son fort ou terminer sa vie de service par un non-éclairage à cause de certains impacts, d'imperfections ou d'une détérioration due aux heures d'utilisation. En particulier, la vie de service sera grandement affectée si vous allumez et éteignez la lampe de manière fréquente et/ou répétée.
- La vie de service d'une lampe au mercure varie individuellement et selon les conditions d'utilisation.
- Dans de rares cas, elle peut éclater un peu après son premier allumage.
- La possibilité d'un éclatement augmente quand la lampe est utilisée au-delà du temps de remplacement.
- La lampe se détériore plus vite lorsque utilisée de manière continue pendant 24 heures ou plus. Il est possible de réduire la détérioration de la lampe causée par l'utilisation continue en utilisant la fonction "RELAIS LAMPE".

Nettoyage et maintenance

Débranchez bien la fiche du cordon d'alimentation de la prise avant le nettoyage.

Utilisez un chiffon doux et sec pour nettoyer le coffret.

Pour les taches rebelles, utilisez un chiffon humidifié de solution détergente de cuisine (neutre) et essorez-le pour essuyer le coffret; finissez avec un chiffon sec. En cas d'utilisation d'un produit chimique, suivez ses instructions.

Ne nettoyez pas la surface de l'objectif avec un chiffon pelucheux ou poussiéreux.

Si de la poussière adhère à l'objectif, elle sera grossie et projetée sur l'écran.

Utilisez un chiffon doux et sec pour éliminer la poussière.

Remplacement de la lampe

Attention !

Lorsque vous remplacez la lampe, laissez-la refroidir au moins une heure avant de la manipuler.

- Le couvercle de la lampe devient très chaud, et on risque de se brûler si on le touche.

Assurez-vous toujours que les deux lampes sont installées.

Précautions pour le remplacement de la lampe

Retirez la fiche du cordon d'alimentation et assurez-vous que la section qui entoure la lampe est refroidie.

- Soyez prudent en manipulant la lampe source de lumière. La lampe peut éclater si elle est heurtée par des objets solides ou si elle tombe à cause de la forte pression d'air dans l'ampoule.
- Une lampe usée peut éclater si elle est manipulée sans soin.
Contactez une entreprise d'évacuation des déchets industriels pour l'enlèvement des lampes usées.
- Si vous persistez à utiliser une lampe après le moment où elle aurait dû être remplacée, la lampe peut casser.
- Un tournevis Philips est requis pour le remplacement de la lampe.
Faites attention que votre main ne glisse pas en utilisant le tournevis.

Remarque

- Il n'est possible de mettre l'appareil sous tension que si les deux lampes sont installées.
- La lampe est une pièce en option. Contactez le revendeur.
Bloc de lampe de rechange, modèle n°: ET-LAD57 (une ampoule), ET-LAD57W (deux ampoules)
- Des lampes autres que celles spécifiées ci-dessus ne sont pas utilisables. Utilisez la lampe spécifiée.

■ Moment adéquat pour remplacer la lampe

Les lampes sont des consommables. Comme la luminosité de la lampe diminue graduellement au fil de l'utilisation, il est nécessaire de la remplacer régulièrement. La lampe doit être remplacée après environ 2 000 heures*1 d'utilisation, mais il se peut qu'elle atteigne la fin de sa durée de service avant 2 000 heures*1 suivant ses caractéristiques ou d'autres facteurs tels que les conditions d'utilisation et l'environnement d'installation. Par conséquent, il est recommandé à l'utilisateur de disposer d'une lampe de rechange.

Comme le risque d'éclatement de la lampe augmente après 2 000 heures*1 d'utilisation, elle s'éteint automatiquement.

	Indication sur écran	Témoin de lampe
		
Après 1 800 heures*2	L'indication apparaît pendant 30 secondes ou jusqu'à ce que l'on appuie sur une touche de commande.	Le témoin de lampe s'allume en rouge même en mode de veille.
Après 2 000 heures*1	L'indication ne disparaît que si l'on appuie sur une touche de commande.	

*1 Il s'agit du temps de fonctionnement si la lampe a uniquement été utilisée avec le réglage PUIS.LAMPE "HAUTE". Si la lampe a été utilisée uniquement avec le réglage PUIS.LAMPE "BASSE", le temps de fonctionnement est de 3 000 heures. Si la lampe a été commutée de PUIS.LAMPE "HAUTE" à "BASSE", le temps de fonctionnement cumulé obtenu par la formule de conversion ci-dessous sera de 2 000 heures.
Temps de fonctionnement de la lampe = Temps de fonctionnement avec PUIS.LAMPE "HAUTE" + (Temps de fonctionnement avec PUIS.LAMPE "BASSE" x 2 ÷ 3).

*2 Il s'agit du temps de fonctionnement si la lampe a uniquement été utilisée avec le réglage PUIS.LAMPE "HAUTE". Si la lampe a été utilisée uniquement avec le réglage PUIS.LAMPE "BASSE", le temps de fonctionnement est de 2 700 heures. Si la lampe a été commutée de PUIS.LAMPE "HAUTE" à "BASSE", le temps de fonctionnement cumulé obtenu par la formule de conversion ci-dessous sera de 1 800 heures.
Temps de fonctionnement de la lampe = Temps de fonctionnement avec PUIS.LAMPE "HAUTE" + (Temps de fonctionnement avec PUIS.LAMPE "BASSE" x 2 ÷ 3).

■ Procédure de remplacement de la lampe

- ① Mettez hors tension en suivant la procédure de la page 25, débranchez la fiche électrique et vérifiez que les éléments autour de la lampe ont refroidi.

Assurez-vous que le ventilateur est arrêté.

Attention

La lampe est chaude si elle vient d'être utilisée.

Vous risquez de vous brûler si vous la touchez alors qu'elle est encore chaude.

Préparez un tournevis Phillips à l'avance.

- ② Retirez la vis fixant le cache de la lampe, puis faites-le glisser un peu vers la gauche et retirez-le.

- ③ Retirez les deux vis fixant le ventilateur.

Remarque • Les lampes sont construites de telle manière que les vis des étapes ② et ③ ne tombent pas complètement.

- ④ Ouvrez le ventilateur comme illustré sur la figure.

- ⑤ Retirez les vis fixant les lampes (deux pour chaque lampe), saisissez les poignées et retirez les lampes.

- ⑥ Installez la nouvelle lampe.

- ⑦ Utilisez un tournevis Phillips pour serrer correctement les 2 vis de fixation de la lampe (deux pour chaque lampe).

- ⑧ Serrez fermement les deux vis pour bien fixer le ventilateur.

- ⑨ Faites glisser le cache un peu vers la droite et fixez-le au moyen de la vis pour monter solidement le cache de lampe.

Attention • La lampe et le cache doivent être correctement fixés. Si ce n'est pas le cas, un circuit de protection entre en action et la mise sous tension sera impossible.
